method

MWD COMPETITORS

Method vs. Odoo

ODOO POSITIONING

Odoo is a modular ERP platform (all-in-one incl. CRM, Inventory, Accounting, Manufacturing, etc.) that offers built-in tools, giving businesses a unified system to run operations end-to-end.

Odoo Manufacturing is a module within Odoo's ERP that helps manage planning, scheduling, execution, and quality control, integrating with Inventory, Procurement, and Sales.

method POSITIONING

Method is **purpose-built for QuickBooks users** and gives businesses the power to customize workflows, manage orders and automate end-to-end sales processes, without the cost or complexity of enterprise software.

Flexibility and customization | **Two-way QuickBooks sync** | **Lower cost than ERP softwares**

odoo

Strengths	How to respond
Full manufacturing suite *(Material req. planning, Bills of Materials, Manufacturing execution system)*	Method doesn't want to replace your entire tech stack. Method is purpose-built for QuickBooks users **to unify data across quoting, orders and finance.**
Odoo Accounting + ERP CRM *(customers shift from Method & QuickBooks to Odoo's all-in-one solution)*	Do you want to change your accounting platform or look for a CRM that works with it? It's major shift requiring training for your finance team and rebuilding your stack. And while Odoo looks flexible, their customization requires devs and **adds cost fast**, especially for manufacturers with complex workflows.
Highly flexible CRM with customization capabilities	Sounds great, but it's expensive and developer-dependent. **With Odoo, even small changes often require custom code.** Method gives you real customization, backed by a team that builds it with you, no dev team or plugins needed.
Built-in inventory management system	Method is highly customizable and **can build workflows that support inventory tracking** at an affordable cost, giving you flexibility without the complexity.

method

Differentiator

"#1 QuickBooks sync in the market" - Real-time, two-way sync with QB Desktop & Online. Allows your team to stay on the QuickBooks system they already know.

"Enterprise customization at SMB prices" - Method gives you the flexibility to tailor your CRM to your exact workflows, get tools you'll actually use and customization options **without the high costs or complexity of an ERP**.

"Flexible pricing options" based on the features (packs and apps) you'll use with DEP customization options.

For **advanced needs, Dedicated Enhancement Plans (DEP)** let you customize affordably.

odoo INTUIT quickbooks

NO native two-way QuickBooks integration with Odoo

Third-party connects are required but they still only:
- Often **one-way sync** i.e. pushing invoices to QBO
- Limited in scope (don't cover all transaction types or syncing logic)
- Require expensive ongoing dev work or support

Important note: *Odoo also has its **own accounting module**, which creates conflict, it prefers you use Odoo Accounting, not QuickBooks.*

odoo

Best fit customer

Small/mid-market businesses (upto $50-100MN) that want an all-in-one suite **with less complex workflows and are NOT strictly tied to QuickBooks.**

method

Best fit customer

Businesses **using QuickBooks that need a customizable CRM at an affordable cost** to manage sales, orders, & customers without leaving the accounting system they trust.

odoo What Customers Say method

*"Features are limited and if you want them you can **pay someone more money to develop it.** Always a cost for everything with this." -Odoo customer*

*"The wide range of apps and options makes it **tough for beginners** to dive in alone. They offer success packs, but they're pricey." -Odoo customer*

*"..so many pages, maybe a **lot of requirements for customizations** especially for some **business processes which takes time.**" -Odoo customer*

*"It seems all of their **developers are overseas, so timing is a real issue.** We were told our implementation would be complete by the end of January, and we are in July now and still none of out inventory stays in sync on any of our platforms." -Odoo customer*

odoo Implementation & Setup

Sales Talk

*"Odoo might look close on per-user pricing, but once you factor in implementation and partner costs for multiple modules, **by the time it's actually usable for your business you're often $20–50K in.** Method is purpose-built for what your team needs, without the ERP-level price tag."*

Features	Method	Odoo
QuickBooks integration	Real-time, two-way sync for QBO and QBDT	No native QB sync (3rd party only; one-way)
Inventory management	Basic (can be customized)	Advanced (via Inventory and MRP modules)
Manufacturing tools	Limited (can be customized)	Full suite (MRP, BoMs, Routing)
Customer portal	FREE (included with subscription)	FREE (read-only access/customization limits)
Customization support	$155/hour (or DEP @ $325/for 3 hrs/month)	$120- $200/hour (Min 10-20 hrs commitment $1200 to $4000 upfront)
Mobile access	✓	✓
	$25 per user per month	**~$47 per user** (customization based on modules $5k to $50k)
