WHY METHOD EXISTS IN THE QUICKBOOKS WORLD

QuickBooks + Method CRM Integration Battlecard

Method isn't just a CRM. It's how you turn QuickBooks into a full business system, without changing accounting software.

method POSITIONING

Method is **purpose-built for QuickBooks users** and gives businesses the power to customize workflows, manage orders and automate end-to-end sales processes, without the cost or complexity of enterprise software.

- **Flexibility and customization**
- **Two-way QuickBooks sync**
- **Lower cost than ERP softwares**

INTUIT quickbooks + method

Key benefits	Why Method matters
QuickBooks Online (QBO)	• Cloud-native, real-time sync • Mobile-ready CRM and sales pipeline • Unified customer view: sales + financials • Forecast revenue with real-time data **Objection:** *"QBO already stores my customers."* **Response:** *"Right, but Method **turns those names into a full CRM**, lead tracking, reminders, follow-ups, and quoting tools."*
QuickBooks Desktop (QBDT)	• Adds cloud/mobile access to desktop data • Send estimates, update jobs from anywhere • Quote-to-invoice process without logging into QBDT • Keeps financial access locked down while giving sales teams what they need **Objection:** *"We're sticking with Desktop for now."* **Response:** *"Perfect. Method gives you **modern cloud access** without forcing a move to QBO. Your field crew can quote, close, and invoice without ever touching QBDT."*
Intuit Enterprise Suite (IES)	• Completes the front-office gap (sales and customers) that IES doesn't cover • Enables enterprise-level CRM and customization • Prevents need for costly ERP migration • Supports role-based access to protect financial data **Objection:** *"IES is already a big investment."* **Response:** *"Adding Method supports that investment, giving you sales tools, CRM, and automation **for a fraction of ERP costs.**"*

method

The Method sales pitch for QuickBooks

QBO Users - True **operational harmony** with unified sales and financial data in real-time. Empower teams for **faster growth and smarter decisions.**

QBDT Users - Method CRM provides a **critical solution** to the inherent lack of mobile access and **remote collaboration**. This transforms a stationary accounting system into a **dynamic, mobile-friendly business tool**.

IES Users - Maximize your IES investment. Method enhances security, boosts efficiency, and **avoids the massive cost and disruption** of a full ERP migration.

method Foundational Value

Complete Customer Lifecycle Management

- **Lead to Customer** — Seamless conversion process
- **Centralized Data** — All interactions in one place
- **QuickBooks Sync** — Direct integration included

Lead Management (Core Feature)
Collecting new leads, nurturing them through email campaigns, and converting them into customers, including web-to-lead forms for direct website capture.
QuickBooks Integration

Invoicing & Payments (Core Feature)
Instant invoice creation and direct emailing to customers for faster payments, along with customer portals for online payment processing.
QuickBooks Integration

Opportunities Tracking (Core Feature)
Providing a centralized view of sales opportunities to ensure no potential deals are missed.
QuickBooks Integration

Customer Portals (Core Feature)
Branded portals allowing customers to approve estimates, access order details, make payments, and view job details.
QuickBooks Integration

Activities Management (Core Feature)
Consolidating all customer interactions in one place, with automated follow-ups and reminders to ensure timely engagement.
QuickBooks Integration

Reporting (Core Feature)
Providing detailed reports for comprehensive business insights and better decision-making.
QuickBooks Integration

Customer Management (Core Feature)
Centralizing all customer data, with seamless syncing directly to QuickBooks.
QuickBooks Integration

Multi-Entity CRM (Core Feature)
The ability to manage multiple businesses within a single CRM, standardizing processes across all locations.
QuickBooks Integration

Estimates & Proposals (Core Feature)
Rapid creation and sending of estimates and proposals, including automated engagement letters and secure e-signatures for faster deal closure.
QuickBooks Integration

Field Operations Support (Core Feature)
Includes time tracking, flexible scheduling and dispatching tools, and work order management (creating, managing, assigning, and converting to invoices).
QuickBooks Integration
