COMPETITORS

Method vs. NetSuite

NETSUITE POSITIONING

NetSuite is a **powerful, ERP and CRM platform built for complex business operations** with financial, inventory and production planning capabilities, advanced reporting and accounting modules.

method POSITIONING

Method is **purpose-built for QuickBooks users** and gives businesses the power to customize workflows, manage orders and automate end-to-end sales processes, without the cost or complexity of enterprise software.

Flexibility and customization

Two-way QuickBooks sync

Lower cost than ERP softwares

NETSUITE

Strengths	How to respond
All in one ERP + CRM	Good for multiple business operations (HR, deep inventory management etc.) but most SMBs don't need that complexity or cost.
Deep customization *(SuiteScript coding language)*	True, but requires developer time, consulting fees or high customization costs. Method offers customization and DEP at a much lower cost.
Advanced reporting	Useful for larger finance teams. But Method's built-in reports powered with the QuickBooks synced data covers the key needs.
Advanced financial modules *(For example: expense allocations, amortization & statistical accounts)*	You're already using QuickBooks for accounting which covers most of your financials, Method adds the CRM power without an expensive ERP.
Inventory management	Method does not have a robust tool for this but you can integrate easily with any other inventory management system and have them all inter-connected with QuickBooks.

method

Differentiator

"#1 QuickBooks sync in the market" - Real-time, two-way sync with QB Desktop & Online. Allows your team to stay on the QuickBooks system they already know.

"Enterprise customization at SMB prices" - Method gives you the flexibility to tailor your CRM to your exact workflows, get tools you'll actually use and customization options **without the high costs or complexity of an ERP**.

"Flexible pricing options" based on the features (packs and apps) you'll use with DEP customization options.

For **advanced needs, Dedicated Enhancement Plans (DEP)** let you customize affordably.

NETSUITE

Best fit customer

Mid-sized to enterprise businesses with complex operations, global entities, and a **need for full ERP (financials, inventory, HR, and CRM)** in one system.

method

Best fit customer

Businesses **using QuickBooks, alongside inventory tools that integrate with QB** (like Katana or Fishbowl), and need a customizable CRM to manage sales, orders, & customers without leaving the accounting system they trust.

method + INTUIT quickbooks

Method has a **real-time, two-way instant sync with QuickBooks Desktop & QuickBooks Online. Built-in**, no extra tools needed.

NetSuite **does not** have a native QuickBooks sync. It requires third-party connectors like Skyvia or Celigo etc. adding cost and complexity to your setup.

NETSUITE What Customers Say method

*"NetSuite is expensive, **pricing and packaging should be more flexible** so as not having to pay for functions you don't require." -NetSuite customer*

*"I **spent nearly 10 years and over $100K with NetSuite** as part of their Corporate Referral Program — but after stumbling on Method, I realized it's better than anything they ever offered." -Method customer*

*"..in his search for a new CRM he's also **engaged with NetSuite; who quoted him $40,000 for 3 users** and migration off Hubspot." -Method lead*

*"The most **basic customer support from NetSuite is expensive**..the free support can take days to get an answer." -NetSuite customer*

Features	Method	NetSuite
Setup Costs	No formal setup cost	Yes (**mandatory $25k to 75k** + via implementation partners)
QuickBooks sync	Real-time, instant two-way sync	No (requires third-party integration)
Inventory management	Limited (can be extended via app integrations)	Robust, native inventory tracking
Customization cost	$155/hour	$150-$300/hour
Business intelligence/AI	Limited (custom dashboards available)	Strong analytics and forecasting tools
Mobile access	✓	✓
	$25 per user per month	**~$99 per user** + $25,000 **mandatory setup cost**, + expensive ERP modules, + support, add-ons, etc.
