Barbara / John Inventory Start Date Jam

Invited John Miranda Barbara Stevenson

Attachments Barbara / John Inventory Start Date Jam

Meeting records Transcript

Summary

During a discussion about severe weather, John Miranda and other participants affirmed their preference for working from home. The team's sprint is progressing well, with Nermitt, Fine, and Kenishka focusing on defects and conversion problems, while Kesha is working on a ticket created by John Miranda to change the status label from "delivery" to "ship." The main discussion focused on the complex issue of inventory validations and backdating capability, which Barbara Stevenson and John Miranda discussed in light of Rich's concerns about customers not knowing their inventory start date, leading to consideration of three options for inventory start dates and three flows for re-enabling inventory. John Miranda will create a ticket detailing the options, and Barbara Stevenson will task Rich to spike the ticket for scope estimation; additionally, John Miranda will ask Claude about how other IMS platforms handle updating past transactions, and Barbara Stevenson proposed a solution for service/non-inventory items in the invoicing modal.

Details

- **Discussion of Severe Weather and Office Presence**: The meeting started with a discussion about the heavy snowstorm, which was reportedly heavier than the

previous one and was expected to continue until 6:00 p.m. John Miranda mentioned their volleyball game might be canceled due to the storm, and both speakers expressed a preference for working effectively from home during such severe weather (00:00:00).

- **Sprint Status and Team Contributions**: The sprint is progressing well, with the team moving quickly through outstanding defects. Nermitt and Fine are helping with defects, while Kenishka is focusing on the conversion problem piece (00:02:50).
- **Inventory Status Change Ticket**: John Miranda created a ticket for changing the status label from "delivery" to "ship," and Kesha is working on this because they are already involved in that area. The speakers agreed that this task is not overly complex in terms of work required (00:02:50).
- **Validations and Backdating Issue**: The main topic of discussion was the problem regarding inventory validations, which was previously discussed in the kitchen area. Barbara Stevenson, echoing Ben's previous sentiment, questioned the immediate necessity of backdating capability given the lack of current data, suggesting they may need to consult the PS team (00:03:43).
- **Initial MVP Proposal and Rich's Concerns**: John Miranda and Ben had previously agreed on an easy migration pathway for the Minimum Viable Product (MVP) where validations would only apply forward from the inventory start date, minimizing development complexity and edge cases. However, Rich raised a concern about customers not knowing when their inventory started, which would require them to remember the enablement date (00:04:37).
- **Addressing the Start Date Notification**: Both speakers discussed simply informing customers of the start date by clearly displaying the information, such as adding the official start date to the multilocation settings. Rich argued that PS or support could not resolve the issue because it is an architectural problem related to validating against a start date versus the transaction created date (00:05:34).
- **Concerns with Manual Workarounds and Spiking**: Ben suggested avoiding manual workarounds to solve architectural problems, noting that such behavior was common in the company's past. Barbara Stevenson inquired about the engineering timeline for the proposed route, and John Miranda stated that they first need product and design to decide on a direction before grooming and story pointing can occur (00:06:40). Barbara Stevenson committed to asking Rich, who

had been unhelpful, to spike the ticket to determine the potential eventual effort (00:07:30).

- **Three Options for Inventory Start Date:** The speakers defined three potential directions for the inventory validation problem: the first option (discarded) was doing nothing, resulting in validations being applied everywhere, which creates a bad user experience. The second option, preferred by Ben, was enabling inventory today and only applying validations moving forward. The third option was providing users with two different options upon enablement: starting tracking today or choosing a start date, potentially up to a year prior, via a date selector (00:08:17).
- **Complexity of Disabling and Re-enabling Inventory:** The discussion moved to the complexity surrounding a user disabling and then re-enabling inventory management (00:09:05). They considered whether a user should be allowed to choose a new start date upon re-enabling or if they should revert to the previous start date (00:09:57). The current system allows for enabling and disabling without data loss, meaning a user starts back where they left off (00:11:04).
- **Defining Flows for Re-enabling Inventory:** The speakers outlined three potential flows for re-enabling inventory after a user has disabled it: the first flow would automatically revert to the previous state, restoring all data (00:28:41) (00:36:40). The second flow would offer the user an option to either "pick up where they left off" or "start tracking from today" (00:33:59). The third option, where the user could freely define a new historical date, was deemed too complex and was dismissed for adding too much complexity to the MVP (00:36:40) (00:39:00).
- **Recommendation for Option One from Claude:** John Miranda shared feedback from Claude, an AI, which strongly recommended Option One (tracking from today's date only) as it solved the core problem of old transactions getting blocked with zero friction. Claude noted that Options Two and Three add complexity without proportional value, suggesting that backfilling data is inherently painful and should be avoided (00:47:56).
- **Addressing Start Date Visibility:** In response to the engineering team's caveat that customers need to know the start date, Claude suggested that this is a display problem, not a design problem, which can be solved simply by showing the start date in the settings. Barbara Stevenson agreed that this simple fix, which directly addresses Rich's concern, is already close to their current plan (00:50:06).

- **Accessing Past Transactions and External Platform Comparisons:** The speakers discussed a concern raised by Asher that some companies need to update initial transactions, sometimes for the previous fiscal year, such as during tax time (00:51:03). John Miranda was tasked with asking Claude about how other Inventory Management System (IMS) platforms handle this and to share their findings and designs with Ben in a document (00:48:51) (00:52:08).
- **Creating a Ticket and Rich's Spiking Task:** John Miranda confirmed they would create a ticket detailing the options, and Barbara Stevenson would then approach Rich in the office to ask them to spike the ticket and provide an estimation of the increased scope. The current launch date is scheduled for February 27, next Friday, but this problem increases the scope of work (00:44:32) (00:53:18).
- **Addressing Service and Non-Inventory Items:** Keshka raised a question about how service and non-inventory items are handled in the invoicing flow, as the current design only considers inventory part items that have been delivered or shipped (00:54:09). A possible temporary solution discussed was moving service/non-inventory items from the "not shipped/not received" tables to the "shipped/received" tables so their invoice status can be tracked (00:55:12).
- **Proposed Solution for Service/Non-Inventory Items in Modal:** Barbara Stevenson suggested redesigning the invoicing modal to include a clear separation, possibly with a switchable tab, for service items and inventory items. This would allow users to select applicable service items, and the resulting invoice would include both inventory and service items, solving the problem without lengthy delays to the current sprint (00:56:04).

Suggested next steps

- [ ] John Miranda will block Barbara Stevenson's calendar later in the day to go over the service and non-inventory items in the invoice flow.
- [ ] Barbara Stevenson will ask Rich to spike the ticket for the validation discussion to understand the timeline.
- [ ] John Miranda will create a ticket for the validation options and relate it to Rich.
- [ ] Barbara Stevenson will mock up the design for the service and non-inventory items in the invoice flow.
- [ ] Barbara Stevenson will clean up the options for the validation problem to clearly show them.

Barbara / John Inventory Start Date Jam - Transcript

00:00:00

John Miranda: Yo, Barbara,
Barbara Stevenson: How's it going?
John Miranda: I'm chilling. I'm chilling. How How's How are you? How's the office? How's
Barbara Stevenson: Offices like Let me show you what's going on outside.
John Miranda: everything?
Barbara Stevenson: I don't know why I'm here. Oh, no. I don't think you see it. But yeah, it's it's
John Miranda: Yo,
Barbara Stevenson: something.
John Miranda: I'm like looking outside my rear mirror right now. Damn, this is crazy. I thought like I thought we were done with
Barbara Stevenson: I thought so, too.
John Miranda: this.
Barbara Stevenson: I think this is even heavier than the last time. Like compared to when came outside when I got here and now like this isn't stopping
John Miranda: Yeah.
Barbara Stevenson: at all. Yeah. I'm going
John Miranda: Yeah. I have a I have like a volleyball game tonight and like my team's like,
Barbara Stevenson: to
John Miranda: "Oh, I don't know if we can make it with this storm." So, I'm hoping like this this clears up so we can make it still.

00:01:57

Barbara Stevenson: So, but I hear it's going to go on to like let me see what's happening

in the weather.
John Miranda: But
Barbara Stevenson: Whatever. Um, heavy snow for the next hour. It's snowing till 6:00 p.m. That's crazy.
John Miranda: Jesus damn, man.
Barbara Stevenson: That's crazy. That's the whole
John Miranda: Oh, this is bad.
Barbara Stevenson: day.
John Miranda: Then tomorrow I gotta get Oh, f***. Yo, I I hate this.
Barbara Stevenson: No, first off, if it's too bad tomorrow,
John Miranda: this.
Barbara Stevenson: I'm not going to bother myself cuz to even get here, street cars kept stopping. I had to get down, wait, get on another one. Yeah,
John Miranda: Yeah,
Barbara Stevenson: I'm just I rather work effectively from my house, guys. I think we have this level of trust
John Miranda: I know 100%.
Barbara Stevenson: now.
John Miranda: Like if there's weather like this, just stay home. That's like my mentality, you know?
Barbara Stevenson: Literally saying I live
John Miranda: But you're a trooper though.
Barbara Stevenson: here.
John Miranda: You made it still.

00:02:50

Barbara Stevenson: Yeah.
John Miranda: So,
Barbara Stevenson: I can't believe I'm here. I'm regretting my decision so much.
John Miranda: it's okay, Barbara. Don't worry. Don't worry.
Barbara Stevenson: My god.
John Miranda: It all will be well when you get back home
Barbara Stevenson: All right.
John Miranda: eventually.
Barbara Stevenson: How's it going with the sprint? By the way, I haven't checked if they've made any updates yet because I've been so busy with

John Miranda: Yeah. So,
Barbara Stevenson: connect.
John Miranda: sprint's moving. Um, they're they're flying through the defects now. like the entire team's so nermitt's helping with defects, Fine's helping,
Barbara Stevenson: Okay.
John Miranda: Kenishka's working on the whole conversion problem piece that we talked about. Um, so working on that. Um, I created that ticket for changing the status from a delivery to ship. So, Kesha has that because he's working in the same area anyways. Um but whenever you whenever you understand more about that one like if should be some or
Barbara Stevenson: Okay.
John Miranda: all partially or fully we can just let uh Kishka know because it's only the button that would changing anyways.

00:03:43

Barbara Stevenson: Yeah. Yeah. Yeah.
John Miranda: Right.
Barbara Stevenson: I think you just need to do that a few
John Miranda: Exactly. Exactly.
Barbara Stevenson: times.
John Miranda: So it's not too too much uh complexity or not too much work there.
Barbara Stevenson: Okay.
John Miranda: Um the only like thing that's that's like the problem now is this this meeting like what we're discussing in this meeting about the validations. So, like I know we talked about it when we were in the kitchen area, but like um how familiar are you with the whole problem
Barbara Stevenson: I think I'm I'm familiar with it. Um, you know,
John Miranda: here?
Barbara Stevenson: my as well was similar to what Ben said, like why do we need to bag dates? Do we need that right now? Like I don't really understand the why because we have no data for anything about it. we just have which is the engineer's opinion on what if somebody wants to do something from the past.
John Miranda: Yeah.
Barbara Stevenson: I don't know if it'll be useful to talk to the PS team like I don't know what solution like we have except let's do it and find out.

00:04:37

Barbara Stevenson: I'm curious to know what Ben is thinking as opposed
John Miranda: Yes.
Barbara Stevenson: to
John Miranda: So literally I was kind of shocked because like me and Ben were literally discussing this for about 30 minutes and we concluded about moving forward with the easy migration pathway about enable it as a date of
Barbara Stevenson: no.
John Miranda: uh inventory start date and validations only apply forward not backward and users can't change anything like it's the easiest path towards MVP.
Barbara Stevenson: Go ahead.
John Miranda: there's no complexity from a development standpoint and we're removing a bunch of edge cases because we don't know yet. And um and if the user does need something, they can just reach out and uh we can get gather more data and figure out how to iterate towards that experience.
Barbara Stevenson: Yeah.
John Miranda: But then Rich was like, "Yeah, I don't know if that's a good idea because how would customers know uh that inventory starts today?" And they would always have to remember that this start date when they enabled inventory
Barbara Stevenson: Can't we if is that the problem the start date?

00:05:34

John Miranda: management.
Barbara Stevenson: Because if the problem is the start date, why can't we add that in our multilocation thing like the official day you started with it grade out inactive or whatever? Like if that notification is the
John Miranda: that that was like his problem there.
Barbara Stevenson: problem.
John Miranda: Um that's what I was thinking too. We could just like clearly inform them of hey like you enabled it today. This is when this starts.
Barbara Stevenson: Yeah. Yeah.
John Miranda: That would stop

Barbara Stevenson: And like if you to I feel like we just add that caveat if you want more for more information
John Miranda: there.
Barbara Stevenson: or to backdate possibly like we could just put hand that there reach out to the PS team or support and then see
John Miranda: Yeah. So, Rich was also saying that there's nothing really uh PS or support can do here.
Barbara Stevenson: like
John Miranda: Um because this is more of an architectural problem like we would be validating against our start date versus transaction created date. So, the workaround here would be that the user or PS or whoever would need to change the created date to sometime after the inventory start date to start getting validations or start tracking.

00:06:40

John Miranda: But Ben was basically saying like we should we should like avoid doing that type of behavior because that's kind of rooted in the past about how uh we Yeah.
Barbara Stevenson: It's so confusing even.
John Miranda: He was also saying that's kind of how people or how the company was working previously before he joined about using these like manual workarounds to solve these types of problems. Um that would be
Barbara Stevenson: Have you been able to like how long this would take if we if we go with this route like what are the engineers
John Miranda: like
Barbara Stevenson: saying in terms of timeline it for
John Miranda: so They didn't they didn't give us any like uh because we would need a story point this
Barbara Stevenson: us can't rich spike it for us then
John Miranda: sorry right this guy is not he he he didn't
Barbara Stevenson: like
John Miranda: he didn't really give much help when we were talking to him uh he he he wants product to and design to decide and then we can just groom and story point it basically and then we'll know

00:07:30

Barbara Stevenson: I'm gonna ask him like just spike it,
John Miranda: how I
Barbara Stevenson: bro. Like you are part spike it in the meantime cuz it might be an eventuality,
John Miranda: Oh
Barbara Stevenson: right? Like what are you doing?
John Miranda: yeah. Yeah. He hasn't been that helpful from that
Barbara Stevenson: We like called him out in our like thing and said like you're on
John Miranda: standpoint.
Barbara Stevenson: boarding. What are you on boarding? You're not a new person here. You just switched titles and you're on boarding what? Jira. Like yo, this is I'm going to stop him today and ask him like would could you help us spike
John Miranda: Yeah.
Barbara Stevenson: this and see what he Yeah,
John Miranda: You're going to
Barbara Stevenson: he's in the office. I'll just be like, "Hi, Rich." Like after this meeting, regardless, I'm just going to ask him to spike it. Like,
John Miranda: Okay.
Barbara Stevenson: do you mind spiking this ticket?
John Miranda: Yeah.
Barbara Stevenson: Do you have a ticket for it?

00:08:17

John Miranda: Yeah. I didn't create the ticket because I wanted to talk to you before we figure out like which direction we want to take. Um cuz like I think that's like the decision we got have to make here and present because
Barbara Stevenson: Yeah.
John Miranda: I was just like brainstorming.
Barbara Stevenson: Yeah.
John Miranda: I think like the main decisions here are uh we do nothing and uh we turn on the validations are applied everywhere. That's just a bad experience.
Barbara Stevenson: Yeah.
John Miranda: So I don't I you can out right.
Barbara Stevenson: Yeah. Exactly.

John Miranda: Uh the second one is what Ben suggested was you turn it on. That's a date of inventory start date. You continue validations are forward they can apply backward.
Barbara Stevenson: Yeah.
John Miranda: Uh the third one we were talking about was when you enable inventory you're provided
Barbara Stevenson: Yeah.
John Miranda: with two different options. So you can choose your inventory start date as today or you can choose your inventory start date as like
Barbara Stevenson: Yeah.

00:09:05

John Miranda: one year before or something or maybe even like a date selector.
Barbara Stevenson: Yeah.
John Miranda: Uh and the user can choose which ones that they want. It's like I
Barbara Stevenson: Yeah. 3 months. Maybe what they could do is like how much what's the caveat like literally to extract things we have stuff
John Miranda: order.
Barbara Stevenson: limitations one year, 3 months, 6 months like you said. So maybe our limitation is one year and that's the best we could do, right?
John Miranda: Yeah,
Barbara Stevenson: Like
John Miranda: exactly. Even when I was talking to PS about it, they mentioned that customers typically update transactions one year before during the fiscal year.
Barbara Stevenson: yeah.
John Miranda: So when I told Ben that that we could possibly do just one year as a starter uh if we move forward with that option. Um the problem there is we get into the edge cases and the complexity regarding we can we allow customers to disable inventory management at any point in time. Right? So once they go back to the enablement workflow, what do we do?

00:09:57

John Miranda: Do we uh allow them to choose their start date again or do we uh just

revert back to that previous start date that they chosen? what if it was like one year ago. It just continues from that forward. We don't allow them again or we do like
Barbara Stevenson: Yeah. What's the What's the reason why a user would want to disable it?
John Miranda: that's
Barbara Stevenson: Like customization or
John Miranda: maybe uh maybe they don't prefer our um because like one
Barbara Stevenson: your solution.
John Miranda: our solution because one thing is we we are turning this on for everyone like everyone who can't get it.
Barbara Stevenson: Yeah.
John Miranda: So that includes people who are not technically within the inventory space. Maybe they don't need it, so they disable it.
Barbara Stevenson: Yeah.
John Miranda: Uh so that's one possible solution. Or even our solution might not work for them and they don't like it, they disable it and
Barbara Stevenson: Yeah.
John Miranda: then
Barbara Stevenson: I'm not I'm not sure about that bit at all because I'm like okay if they want to enable it if they about to disable it do we tell them everything is lost from the past or do we tell them it's archived like what's a more useful thing for them we didn't really find that out we don't know and also the complex and I feel like an archive is possible just because we don't hard delete

00:11:04

John Miranda: Yeah.
Barbara Stevenson: anything um and if they choose to restore it it should be do you
John Miranda: Yeah.
Barbara Stevenson: want to restore previous version or do you want to start a fresh? I feel like we could have those two options just because we already have like a back end. We never actually delete anything. So maybe those are
John Miranda: Yeah. That could be possible. So like how we're doing it today with disabling is uh you can disable enable at any time and we're
Barbara Stevenson: possible
John Miranda: not losing any data. So if you dis if you started inventory like a month ago and then disabled it a month later and then you started it a month after you would

start back where you uh
Barbara Stevenson: from where you went.
John Miranda: basically so like that's what we're
Barbara Stevenson: Yeah. But if it's a year,
John Miranda: doing.
Barbara Stevenson: do they want to see that? We don't even know.
John Miranda: Oh, like uh see validations from a year
Barbara Stevenson: But like yeah like so for example if they

00:11:58

John Miranda: ago.
Barbara Stevenson: disable it and then they want to enable this five months later for whatever reason I don't understand why they would disable it right all the from 5 months ago till now then is attached to inventory like
John Miranda: Yeah,
Barbara Stevenson: not moving forward like everything is restored to previous version right so I guess we just whatever we
John Miranda: basically it
Barbara Stevenson: decide we just need to also find out from PS like a couple conversations like since you said it already exists I'm just Short term makes sense, but I'm thinking longer term. Would that cause some form of, you know, confusion? Like, huh?
John Miranda: Mhm.
Barbara Stevenson: I don't know.
John Miranda: Honestly,
Barbara Stevenson: I actually have no idea.
John Miranda: probably would. It probably would too because customers if they decided to end it five years ago,
Barbara Stevenson: Yeah.
John Miranda: five months ago and it started after five months, there's probably a lot of inventory changes that happen. So, um customer would most likely have to do some like stock adjustments, reconcile their inventory if they wanted to get to the most up to date,

00:12:51

Barbara Stevenson: Yeah, exactly.
John Miranda: like you know,
Barbara Stevenson: We just be discovering edge cases which is fine. Like it's it's fine. There's not you can
John Miranda: Yeah. Yeah.
Barbara Stevenson: do no
John Miranda: But like that's the thing like is this necessary for MVP? Like going this Yeah.
Barbara Stevenson: MVP. I don't think so.
John Miranda: I don't know. Like I don't I feel like we're solving a problem that we don't know enough about or
Barbara Stevenson: I don't Yes.
John Miranda: whether or not we don't know that timeline either that time
Barbara Stevenson: Yeah. And we don't even have the capacity for it,
John Miranda: frame.
Barbara Stevenson: right? Like we don't have enough engineers to say, "Oh, yeah, I'll do this." So I feel like we could just all these our caveats can be documented somewhere like things we want to work towards as regards all these constraints and whether or not we work towards it cuz for this one that Rich is insisting on if his insisting on is because of the date they don't know we could just tell them like I don't see if he had more

00:13:44

John Miranda: Yeah, just tell them.
Barbara Stevenson: concrete if he had more explanation as to why as opposed to notifying then I'd
John Miranda: Mhm.
Barbara Stevenson: say let's dig down But then you spike it while we just tell them for now and add it to canine
John Miranda: Yeah,
Barbara Stevenson: or something,
John Miranda: exactly. Like that's what I am seeing.
Barbara Stevenson: right?
John Miranda: See, like I can just share my screen. Like we could do probably do something like uh give me a

Barbara Stevenson: Okay.
John Miranda: sec.
Barbara Stevenson: Did is Ben coming? I don't even know if he forgot about
John Miranda: Oh, in this meeting.
Barbara Stevenson: this.
John Miranda: No. So Ben said like talk me and you jam about it and then we can just what direction
Barbara Stevenson: Okay. Let him know.
John Miranda: we want to take with Ben afterwards.
Barbara Stevenson: Okay.
John Miranda: Um so like we have this right now, right? So like um uh this is template dev.
Barbara Stevenson: No,
John Miranda: Okay. I don't want to change anything here.

00:14:33

John Miranda: Let me just go to a different account. Give me one
Barbara Stevenson: I
John Miranda: sec. Okay. So, like imagine we click enable here and then we save all changes. We get this popup,
Barbara Stevenson: Yeah.
John Miranda: right? So, here we can probably be maybe more more descriptive about what's going to happen. And uh I don't know how you Oh,
Barbara Stevenson: Yeah.
John Miranda: wait. Sorry. I'm getting a call from Rich. Uh let me just tell him I'm in a call in a meeting. Give me a sec.
Barbara Stevenson: I think
John Miranda: What the hell? I don't know why he's calling. Uh Okay. Yeah, sorry. Um, yeah, we can probably uh put more information here informing them like this is what's going to happen. You're only tracking like from starting now forward. Uh, previous transactions won't be impacted.
Barbara Stevenson: Yeah. So,
John Miranda: Um,
Barbara Stevenson: I feel like we could let me just go to Figma and actually just mock all of this up while we're

00:15:50

John Miranda: yeah. Yeah. If you could share your screen,
Barbara Stevenson: thinking. Yeah,
John Miranda: we can like
Barbara Stevenson: let me just do that. I think that would be Figma,
John Miranda: con
Barbara Stevenson: bro. Connect is after my life. Yeah, it's like there's there's so many things we I mean because of our constraints, right? which is why I've been saying we should document what things we're not doing. So now that we've launched like Ben is like seeing things and the thing is it's not that we didn't see them, we had constraints for them or is in the backlog but he's not really clear on what's in the backlog or not. So I have to do like a full end to end audit of the whole flow and explain the current
John Miranda: Mhm.
Barbara Stevenson: state any bugs or constraints and future recommendations for each screen. And I'm going to have to do that for this as well just before we launch.
John Miranda: Oh yeah.
Barbara Stevenson: It's not just cuz he they don't get it.

00:16:40

John Miranda: Okay.
Barbara Stevenson: Our backlog all of that it's very disjointed. So they're like why does why does this look this way and I have to so that he could explain in board meetings and to Paul in beforehand so that Paul doesn't say why is it this way essentially.
John Miranda: Yeah,
Barbara Stevenson: Yeah.
John Miranda: that's
Barbara Stevenson: So now I have to do that. It's a lot I don't even start from but oh well we'll do
John Miranda: work.
Barbara Stevenson: it. I'm hearing it. It's hitting the window. I'm here. Good. Good.
John Miranda: I've been here all day.
Barbara Stevenson: I don't know. I'm just looking for the enable model so I could just

John Miranda: Oh,
Barbara Stevenson: quickly
John Miranda: I think right below that below location management on the left bar there's enable disabled.
Barbara Stevenson: enable. Okay, let's just let me get a model from
John Miranda: Yeah.
Barbara Stevenson: here and just actually just get this whole thing. So this is what we're exploring. I'm just going to change this text and update it.

00:17:42

Barbara Stevenson: Um, so enable multilocation, right?
John Miranda: Yeah, we'll have to change it to inventory management. So,
Barbara Stevenson: Oh, we're not doing H.
John Miranda: yeah.
Barbara Stevenson: We've changed so many things.
John Miranda: Yeah, a lot of things have been changing,
Barbara Stevenson: Oh, well.
John Miranda: man.
Barbara Stevenson: Um, okay. So, you're about to enable blah blah blah. I'm just going to put I am because we're still like talking about it. Um, so what we're saying is that your start date is
John Miranda: Yeah.
Barbara Stevenson: from um your inventory will start just off the top of my head. Your inventory will start counting or whatever.
John Miranda: Yeah.
Barbara Stevenson: We could adjust this English from today the 10 12 26th or something, right? And b it up. Uh just detach this real quick.
John Miranda: Yeah.
Barbara Stevenson: Go away. All right. um to start before that time or to start at an earlier to backdate your transactions or to add inventory to
John Miranda: Four.
Barbara Stevenson: previous transactions or before this date, right?

00:19:14

John Miranda: Yeah.
Barbara Stevenson: That's like our first solution.
John Miranda: Mhm.
Barbara Stevenson: Even if it's not the PS team. Oh well, reach out to the support team at methodsport.com or something. Whatever it is. I don't remember it right now.
John Miranda: Mhm. Support me or
Barbara Stevenson: Yeah.
John Miranda: whatever.
Barbara Stevenson: Method super me. Right. So this is say we're doing to this is our first solution to this.
John Miranda: Yeah.
Barbara Stevenson: Um the next thing we're considering is can you can we let them backdate?
John Miranda: Yeah. So, that's the one we're considering like having the Yeah.
Barbara Stevenson: So let me I'm looking for sorry give me a second.
John Miranda: having
Barbara Stevenson: So if we do that, um, can we now also have, sorry, bro, I just updated my Figma. It's always rubbish for like two days. So if we do that, could we have something maybe here? um enabled 12 22 35 or right 12 10 25 I mean the UI could be better but just for now so you just always have that there right that's something we're looking to maybe we have it as a

00:20:56

John Miranda: Yeah.
Barbara Stevenson: body copy since we have body copy here let me just um don't really have a lot of real estate here. So enabled on the and then we just make this bold so they always know. So that's the first thing. There's nothing they can do.
John Miranda: Yeah.
Barbara Stevenson: They just know. So that's this is our first whatever.
John Miranda: Yeah.
Barbara Stevenson: Right. What's the second thing we're considering?
John Miranda: Second thing was um when they click enable uh then the modal pops up we would have like maybe like two different options for them.
Barbara Stevenson: two different options in like select a start

John Miranda: Yeah.
Barbara Stevenson: date.
John Miranda: Like you can start tracking today or start tracking like a year out, year before.
Barbara Stevenson: Is it only a year or they could put like a one year? Are we going to have options like one year, 3 months, 6 months?
John Miranda: Yeah, we can maybe Yeah, maybe that's even simpler. Yeah.
Barbara Stevenson: Yeah.
John Miranda: Yeah.
Barbara Stevenson: Okay.

00:22:06

John Miranda: Yeah. Start today one year.
Barbara Stevenson: Um
John Miranda: Yeah. Whatever those those options that you mentioned like one year would be the max and then
Barbara Stevenson: Okay.
John Miranda: inter between
Barbara Stevenson: Exactly. Or or you could back it. Um just thinking all that for now. Let me see. I'm just going to use this right now. Whatever. Start today, I guess, back date. And if they choose to do that, this is okay. Um, let's have a form here. We have a We have a drop down in I think stock adjustment somewhere.
John Miranda: Do we
Barbara Stevenson: No, I don't think so. I mean, we have this one.
John Miranda: need
Barbara Stevenson: Let me just get it here. Fine. Um like start date. I mean we already have select. I'm just going to do the one year. Uh where do we have this dropdown creation? Yeah. Sorry, you know the Jaga I'm doing 6 months I know as typical with you know export whatever see whatever we do um there's no other we're not going to do that one year is the apps, right?

00:25:37

John Miranda: Yeah. One year, six months, three months.

Barbara Stevenson: Yeah.
John Miranda: Yeah.
Barbara Stevenson: Um, what else are we thinking of doing? Oh, whatever. Uhhuh. Another option. So, we have two options now. Just let them know. And this
John Miranda: uh okay so with this flow if
Barbara Stevenson: one.
John Miranda: the user clicks back date then they're presented with the other uh modal screen.
Barbara Stevenson: Yeah. Yeah. Then they select the day and then you know we get that
John Miranda: I see. Yeah. I see. I see.
Barbara Stevenson: feedback.
John Miranda: Okay. Yeah. So, you have those two and then sorry I wrote it down. Um Oh, yeah. Then you had like the date picker option to freely update like the user can like choose specific
Barbara Stevenson: Oh, they can. Okay,
John Miranda: dates like that option like not for
Barbara Stevenson: then I'll just add Okay, that's a third.
John Miranda: this. That's like a third one.

00:26:39

Barbara Stevenson: Okay.
John Miranda: Yeah.
Barbara Stevenson: Okay. And this is just going to be not a drop down.
John Miranda: Yeah.
Barbara Stevenson: And they could do 12 12 24. All right. That's what we're saying. They could do whatever they want.
John Miranda: Yeah. It could be just via a calendar date picker time.
Barbara Stevenson: Yeah. Okay. This is too long. But we don't I'm thinking about the prettiness now. Um okay. And then for year one we would have um this date of enablement date of enablement,
John Miranda: Mhm.
Barbara Stevenson: right? Yeah. Okay.
John Miranda: Yeah.
Barbara Stevenson: What's this one? Sorry. Get out of here. Okay. Okay. Um,
John Miranda: H.
Barbara Stevenson: what else are we going to have them do here?

John Miranda: Um I think those would like be the primary flows.
Barbara Stevenson: Yeah.
John Miranda: Um the next step like the next thing we would have to look into how it would look like if they disabled and enable it again and what that experience

00:28:41

Barbara Stevenson: Yeah. Okay.
John Miranda: might
Barbara Stevenson: Let me just clean this up real quick. Section. I clean this up. My brain just like fries if I don't organize stuff. ish. So let me just do this so we
John Miranda: I'm the same way.
Barbara Stevenson: know that this is here. Okay. Um so now we're thinking about the disable flow right. Um I guess disable will start from
John Miranda: Yeah.
Barbara Stevenson: here. User clicks on disable. I just All right. So, what's the caveat for disable
John Miranda: So I think disabling is okay if they meet the the restrictions like uh but once they enable
Barbara Stevenson: again?
John Miranda: it again I think that's when we need to decide what happens whether we start tracking when they like when they already set the inventory start date or the same workflow And um
Barbara Stevenson: Yeah. Okay. So we have um I'll say three flows we have when you
John Miranda: yeah.
Barbara Stevenson: disable you get everything back.

00:30:09

Barbara Stevenson: That's the first one we have. So that's just going to be a model and we can just like add that UX of it that they get all the information back. Um, I guess the second one is that we tell them they could either we informed them that they would lose what did we say?
John Miranda: Yeah. So, we had like a what do we say when we do that?
Barbara Stevenson: We would What do we say? What do we say? So, if you want to

disable,
John Miranda: Um
Barbara Stevenson: you have to select no. Let me think about this.
John Miranda: Yeah.
Barbara Stevenson: Are you sure?
John Miranda: I'm going to send you what we currently have for disable.
Barbara Stevenson: How do I improve this? Okay. So, we ask them. So, we're not going to let them lose at all, right? Um,
John Miranda: Yeah, we're not Yeah,
Barbara Stevenson: are you you do you would
John Miranda: we're not Yeah.
Barbara Stevenson: What was this? I don't remember.

00:32:17

John Miranda: Yeah,
Barbara Stevenson: Do you have any with
John Miranda: because so what we said originally was you're about to disable inventory
Barbara Stevenson: this?
John Miranda: management. All inventory features and UI will be removed and your account will will return to accounting stock state. Any transactions created while inventory management is disabled will not be reflected in method inventory if you enable it later. So that was our original disabled message.
Barbara Stevenson: Yeah. So, all we're saying is that that it's gone.
John Miranda: Like
Barbara Stevenson: What you just said based on our
John Miranda: uh so it's kind of not really implied
Barbara Stevenson: message.
John Miranda: like that like your inventory is gone. It's more like it just
Barbara Stevenson: Yeah, it stops.
John Miranda: stops.
Barbara Stevenson: But um you mentioned that's what I mean. Sorry. You mentioned that if they enable it again that data is lost right
John Miranda: Oh no. When you enable it again, you just start off where you left. Were you
Barbara Stevenson: so everything is added down to so for example I've had transactions for 6

00:33:06

John Miranda: stopped?
Barbara Stevenson: months for I've been transacting for 6 months I disable it for two months and when I come back after two
John Miranda: Yeah.
Barbara Stevenson: months does it automatically to tie to any of those transactions I made during that time or now have to go do a stock transfer from two months ago.
John Miranda: Yeah. So, um you would have to do a stock transfer stock adjustment etc.
Barbara Stevenson: Yeah. All of that.
John Miranda: But you just basically start back where you disabled it because when you think about it,
Barbara Stevenson: Yeah.
John Miranda: it's literally just like a UI state that we're hiding and showing. So when we enable it again, those transactions that had inventory, you everything will be there still.
Barbara Stevenson: Okay. Okay.
John Miranda: It would all be connected.
Barbara Stevenson: So I think our issue was if it is one year like in the past where they enabled inventory do we want that history there we could foresee issues is that that's what we
John Miranda: Yeah, like the issue is uh when when the user enables it again

00:33:59

Barbara Stevenson: said.
John Miranda: uh should we start back uh where they disabled it or allow them to choose their inventory start date again?
Barbara Stevenson: Yeah. Exactly. Exactly.
John Miranda: That's like the
Barbara Stevenson: Let me Are you sure? So this is So I guess this is still enabled where they they've disabled it or whatever. Um enable inventory management.
John Miranda: Yeah.
Barbara Stevenson: You I guess we need to tell them when they disabled. I don't know if

that's possible. You disabled inventory. I guess they'll spike it. 10 12 I mean 10 12 24 right.
John Miranda: Mhm.
Barbara Stevenson: two years. One year ago, would you like to Sorry, could you help me with that? I'm not sure. My brain's
John Miranda: Yeah. Um,
Barbara Stevenson: freezing.
John Miranda: would you like to continue tracking inventory where you left off? We can make that better.
Barbara Stevenson: Yeah. Would you like to start tracking Richie where you left
John Miranda: But
Barbara Stevenson: off? or start from today, wherever, however we do it.

00:35:20

Barbara Stevenson: So, pick up where I left off. We'll update that. Start tracking inventory. Start tracking from today. So that's what we're saying
John Miranda: Yeah. So yeah.
Barbara Stevenson: essentially.
John Miranda: So basically if we the user chooses start tracking today then we would have to technically like erase inventory tracking from everything and restart
Barbara Stevenson: Yeah.
John Miranda: today.
Barbara Stevenson: Yes.
John Miranda: Um yeah yeah that would be the option
Barbara Stevenson: Okay.
John Miranda: there.
Barbara Stevenson: Okay.
John Miranda: I feel like yeah,
Barbara Stevenson: So,
John Miranda: we have to die. I feel like that's a lot of complexity
Barbara Stevenson: I think so too actually. But
John Miranda: there.
Barbara Stevenson: yeah, we'll see if it's or if it's even an overkill. But it's an edge case for sure. Is there anything
John Miranda: Yeah.
Barbara Stevenson: else?

John Miranda: The other option for that would be um we don't provide them the option. You just start back where you left off.
Barbara Stevenson: Yeah, that's the first one.

00:36:40

Barbara Stevenson: So when you enable, we could just add the notes here just to talk about a talking point that Yeah,
John Miranda: Okay.
Barbara Stevenson: this this just enables and start back where you left off. And here we're giving them the option
John Miranda: Yeah. Yeah. And then um I guess the other one would be the user can define it again like they have the same modal workflow where they can choose. I don't know if we need that but
Barbara Stevenson: like, oh, I want to start tracking from two months ago and not a year ago.
John Miranda: something like that.
Barbara Stevenson: Who knows? We don't know.
John Miranda: Yeah.
Barbara Stevenson: We'll find out if it's useful or not. I guess as we go. Um or just also ask cursor like how often this happens and stuff. You disabled inventory. Um enter a previous. Huh?
John Miranda: Like right now we have two different screens. Would it make sense to have it on one modal itself and the user would just choose and then click confirm like for the enable workflow like uh yeah I'm not too

00:38:01

Barbara Stevenson: I'm not sure cuz it's like two different things we're doing,
John Miranda: sure
Barbara Stevenson: but like now we'll be combining two options in one. That's that's the issue I have with it. And it's like we need to clearly define the steps like yes,
John Miranda: Yeah.
Barbara Stevenson: no. If we do both here. Yeah, it's like it's kind of confusing. Pick up where I left off. So, let me say start tracking.

John Miranda: Mhm.
Barbara Stevenson: So, for example, if we do that and we have enter a date, it's like you now have that thing. Enter date. Start tracking. It's kind of confusing just because it's like it's supposed to be singular steps, but now we've added a third. Like it's two different types of forms. Like if it was a related form field thing, we could do multiple things, but it's like two actions you're carrying out here independently. So, so you can if we do or pick up where I left off or start tracking from today, we could do that, but it's not necessarily the best UX cuz you're we're doing two different things.

00:39:00

Barbara Stevenson: So, that's why I split it into one clear decision and another clear decision.
John Miranda: I see. Okay, that makes sense.
Barbara Stevenson: Um,
John Miranda: And
Barbara Stevenson: so but what you're saying now is um I don't know how we say this now. Disabled inventory a year ago. Would you like to start tracking from the past? Whatever.
John Miranda: Yeah, I think this would be Yeah, because then we would have to add another option for the customer to
Barbara Stevenson: Yeah,
John Miranda: choose.
Barbara Stevenson: cuz
John Miranda: I think like these are would be like the simplest approaches we can go for without going too complex about like allowing the user to choose
Barbara Stevenson: Yeah.
John Miranda: again.
Barbara Stevenson: No, no. So, you're saying we should add this third one where they impute like a dates within the past,
John Miranda: Oh,
Barbara Stevenson: right?
John Miranda: I'm saying like that's just going to add more complexity.
Barbara Stevenson: No, I agree.
John Miranda: Like,
Barbara Stevenson: I think it it is very thinking about it.
John Miranda: yeah, we can just maybe just take that option out like this is simple.

00:40:10

Barbara Stevenson: Okay.
John Miranda: It's complex,
Barbara Stevenson: Okay.
John Miranda: but simpler than allowing them to use
Barbara Stevenson: Yeah. Like sorry to you.
John Miranda: add
Barbara Stevenson: If you want another date, contact the PS team.
John Miranda: Yeah, exactly.
Barbara Stevenson: Like we're not an inventory company sadly.
John Miranda: Yeah.
Barbara Stevenson: Um okay, let's go think about this again, I guess. Um or maybe let's have conversations with cursor on our three options and if there is and claude rather if there's anything else we could think about.
John Miranda: Yeah. Um,
Barbara Stevenson: Let me share um do you mind starting the conversation on your claude? I'm just going to clean this up so we can clearly show the options.
John Miranda: yeah. Yeah. Yeah, sure. I can feed this transcript as well.
Barbara Stevenson: I'll share.
John Miranda: We can
Barbara Stevenson: Yeah. And I'll share this screenshot. Let me just clean it up with the proper context. Um,
John Miranda: Sure.
Barbara Stevenson: let's see. Let me use a proper background.

00:42:10

Barbara Stevenson: Bro, there's someone's voice that is so loud in this team sales. I don't even know who it is, but bro,
John Miranda: Dude, sales team is always so loud.
Barbara Stevenson: I hope they're converting. God,
John Miranda: Hope so.
Barbara Stevenson: just come up here.

John Miranda: What was the first option again? Barbara
Barbara Stevenson: The first option was where we just um you're about to enable your inventory start counting
John Miranda: auto.
Barbara Stevenson: from today to add transactions before this date.
John Miranda: Okay,
Barbara Stevenson: Reach out to the support team.
John Miranda: gotcha.
Barbara Stevenson: Yeah.
John Miranda: Okay.
Barbara Stevenson: Let me clean this up some more. Almost done. Just make this as explicit as I can.
John Miranda: Okay.
Barbara Stevenson: Option Um um enable Right. And then this is gone. This is the next one.
John Miranda: And the third option was uh the day picker, right?
Barbara Stevenson: Yes.
John Miranda: The user can just choose what it
Barbara Stevenson: Yes. And I guess we can add these three options to a ticket and have Rich investigate for us,

00:44:32

John Miranda: Okay.
Barbara Stevenson: please. And like let's see which other options they bring up. Let me let me clearly also see option one two three in here. Um like do some work for us bro. What's our our um um go to market day looking like or rather our dark
John Miranda: We we tracking for February 27,
Barbara Stevenson: launch?
John Miranda: so next Friday. But um this this problem would is it is an increase in scope. So once we scope this out and story point it, then we'll have a better idea of how much extra work involved.
Barbara Stevenson: Yeah.
John Miranda: Yeah.
Barbara Stevenson: Like I'm actually going to be on his a******. Richie Rich, please. Don't do option
John Miranda: Yeah.

Barbara Stevenson: one. Option two. Um
John Miranda: Heat.
Barbara Stevenson: paste to replace. Um, damn. Okay, good. Last one. Um, all right. Last, last but not the least. Option too easy.
John Miranda: Yeah. So, it's interesting.

00:47:56

John Miranda: So I was talking to Claude and I just gave you our three
Barbara Stevenson: Mhm.
John Miranda: options and I gave them the problem. So they basically recommend option one. So it solves the actual problem with zero friction. The core issue is that old transactions get blocked on save. Option one eliminates that entirely. Customers don't need to make a decision. There's no wrong answer. They can pick and there are no edge cases to handle at the UI level.
Barbara Stevenson: Oh god.
John Miranda: Option two and three add complexity without proportional value. The customer asking,
Barbara Stevenson: Huh?
John Miranda: "Should I track from three months ago or six?" is a bad question to put in front of them during a setup. They don't know what they don't know. If they pick six months, they've just created hundreds of old transactions that now require inventory fields, which is exactly the problem you're trying to avoid. You'd be shipping the bug voluntarily. Uh, it matches in precedents. Most inventory systems have a go live date concept precisely because backfilling historical data is painful.

00:48:51

John Miranda: Don't fight this.
Barbara Stevenson: Okay. So,
John Miranda: Um
Barbara Stevenson: how about we add the caveat from our end team and let's see like Yeah,
John Miranda: yeah. Okay. Let me let
Barbara Stevenson: let's see how they interpret that. Like we've done these three

options.
John Miranda: me
Barbara Stevenson: We talked to G-Clauds. We tal we looked at standard inventory systems and this is what it's saying.
John Miranda: Yeah.
Barbara Stevenson: And then we could just show Ben the designs and our findings and recommendations in a document cuz
John Miranda: Yeah.
Barbara Stevenson: one thing about Rich, he will find complexity.
John Miranda: Oh
Barbara Stevenson: He will find that s*** like bro spike it for us then.
John Miranda: yeah.
Barbara Stevenson: This is our own recommendation since you're insisting help us
John Miranda: Mhm.
Barbara Stevenson: out. Can you um also ask it to reference inventory platforms that track this way? So we could just add that in our document standard
John Miranda: Yeah, sure.
Barbara Stevenson: platform such as ABC do this and
John Miranda: Let me just There we go.

00:50:06

John Miranda: Yeah. So,
Barbara Stevenson: yeah.
John Miranda: I just asked it like uh so the caveat from ENG team is that the customers won't know when the inventory start date was if it's option one, right?
Barbara Stevenson: Yes.
John Miranda: And then Claude said that's a display problem, not a design problem. The fix is simple.
Barbara Stevenson: Simple.
John Miranda: Show the start date in settings when the customer enables inventory services
Barbara Stevenson: Literally already what we
John Miranda: accessible and inventory tracking active since uh quotation marks label on the inventory setting
Barbara Stevenson: have.
John Miranda: page. That's a much simpler lift than building a date picker and it directly

addresses the concern. The customer always knows their start date. They just need a place to find it.
Barbara Stevenson: Yep. Agreed.
John Miranda: How do other inventory platforms handle I just asked Claude also Barbara I have to hop off at 12 have another
Barbara Stevenson: Yes, no problem. Did you also mention that somebody um I don't even know who was it Alex or somebody

00:51:03

John Miranda: Okay.
Barbara Stevenson: also mentioned that they might want to access like minus this. So Rich said his bit about the back that did when did they know when it started and I know you mentioned Alex said something about they might want to access past transactions. Wasn't that also something somebody else talked about?
John Miranda: So when I was talking to Asher about this problem,
Barbara Stevenson: Yeah.
John Miranda: he Yeah, he mentioned I can just read it out. Uh he said um some companies work on projects for months and years at a time and they update their initial transaction, sometimes a sales order. In most cases, it's typically just for the previous fiscal year. For example, tax time is coming around and they need to go back to update mistakes on past transactions or have legitimate changes without creating new transactions.
Barbara Stevenson: can you add the question to cursor and let's see what it
John Miranda: Yeah. Okay. Let me let me
Barbara Stevenson: says like bas problems and let's see and
John Miranda: ask.
Barbara Stevenson: also what standard imaging platforms do even that

00:52:08

John Miranda: Yeah. Yeah. Yeah. It's currently looking into what other IMS platforms do. And then I'll ask this question.
Barbara Stevenson: Does this make sense?
John Miranda: Sorry.

Barbara Stevenson: I said does this approach make sense like know how
John Miranda: like the which approach like the approaches that we've
Barbara Stevenson: we gone about it and are going to display it to
John Miranda: identified.
Barbara Stevenson: Ben.
John Miranda: Yeah, I think they make sense.
Barbara Stevenson: Okay.
John Miranda: I think uh we obviously need to fine tune it but for a high level it makes
Barbara Stevenson: Yeah.
John Miranda: sense.
Barbara Stevenson: Okay. I'll share this screenshot.
John Miranda: Yeah.
Barbara Stevenson: We could just add this link to the confluence or whatever. Let me just put exploration. You have a meeting with the engineers.
John Miranda: Uh I know I just have like a just a meeting I have for like personally that I need to do at 12.
Barbara Stevenson: Oh, okay. No problem.
John Miranda: So jump off.
Barbara Stevenson: Got you. How many minutes do we have?

00:53:18

Barbara Stevenson: Just a couple. Okay.
John Miranda: Yeah.
Barbara Stevenson: I guess after that we're good to go. Um, let me show you this link. Update the conference with it.
John Miranda: Okay. Are you going to talk to Rich and get if he can see if he can spike
Barbara Stevenson: Yeah, I think so.
John Miranda: this?
Barbara Stevenson: I think we should also create a ticket, put the options, put our recommendations, the confluence stock.
John Miranda: Okay.
Barbara Stevenson: I I'll when you're done, just let me know. I'll just go stop right wherever he is and tell
John Miranda: Okay. Sure. All right.
Barbara Stevenson: him
John Miranda: Cool. Yeah. I'll um I'll create the ticket. I'll create the ticket and we can

just go through these options and you can share that with with Rich and ask him. Oh, one thing I did have to ask Barbara maybe we have six minutes, but so you know how yesterday like Keshka brought up the whole thing about service and non-inventory part
Barbara Stevenson: Yeah.

00:54:09

John Miranda: items and um our invoice flow uh or like in our accounting flow like what happens. So today like uh when we're invoicing and billing uh orders, we only look at uh inventory part items.
Barbara Stevenson: Yeah.
John Miranda: So service items and inventory items are not included or that's how we scoped it out are not included in uh the billing and invoicing flow. So that modal that you designed would only be referencing what's already been delivered, what has been shipped and what's been received. Right?
Barbara Stevenson: Yeah.
John Miranda: So the question he brought up was what happens with these service and non-inventory items?
Barbara Stevenson: Okay. I'm
John Miranda: So then yeah so like the the possible option is like
Barbara Stevenson: missing
John Miranda: for MVP we ship what we have and then for service and non-inventory items the user would have to create uh invoices manually. Uh there not tied to that modal workflow and the invoice status is related to what's what's in fulfillment. So what's actually physically been moved or been received right?
Barbara Stevenson: What the f***?

00:55:12

John Miranda: Um the other option is we would have to um kind of like redesign how we approach service anonym uh because right now they just stay in the items not shipped and items not received tables. They are not used in fulfillment process at all. Right? So maybe total workflow would have to now look at both tables pull the data if there's service and not
Barbara Stevenson: Yeah.

John Miranda: inventory items in the items not item not receive table.
Barbara Stevenson: Yeah.
John Miranda: We can also invoice those uh which could work.
Barbara Stevenson: Yeah.
John Miranda: Uh but then how would a user know if those items are invoiced? So um what I'm thinking is maybe we can just move those items from the items not shipped and items not received table into the items shipped and items received table as like a temporary solution because it also already has like the invoice status where it says yes or no. Um and then the user knows right away. Then the then the stes are now tracked against all the inventory

00:56:04

Barbara Stevenson: Okay. Okay. based on what you said just off the top of my head how I'm thinking about it is when they want to select from the model why can't
John Miranda: types.
Barbara Stevenson: we also have um a separation like you said inventory items collapsible there might be 60 service items and in the because the columns will be different right but for service items you just select the service items you want for that transaction you can't
John Miranda: Yeah.
Barbara Stevenson: impute um 15 like you can't the actions don't apply like
John Miranda: Yeah.
Barbara Stevenson: you can't do 12 or 15 do this.
John Miranda: Yeah.
Barbara Stevenson: So like there's in that model there's a clear distinction between probably like a switchable tab service items inventory non um and inventory right and in service items you just select the one that applies for service so that when
John Miranda: Yeah.
Barbara Stevenson: you save what appears on the invoice model is inventory and service and then again the fields that are service will just not apply like look like we don't have location what do we have the I don't remember what's on the inventory model but do you get what I mean
John Miranda: I think I get it.
Barbara Stevenson: Yeah,
John Miranda: Um maybe you can show quickly.
Barbara Stevenson: let me Okay,

John Miranda: Uh we can have another meeting to go over this
Barbara Stevenson: so we could have you could block my calendar probably anytime later in the day and I would just mock something up.
John Miranda: too.
Barbara Stevenson: So, you see what I mean?
John Miranda: Okay. Yeah. Yeah,
Barbara Stevenson: I think that solves the problem and they could still work this sprint.
John Miranda: sure.
Barbara Stevenson: Like that's like not a long time for me to update and they could just spike
John Miranda: Okay.
Barbara Stevenson: it.
John Miranda: All right. Cool.
Barbara Stevenson: Okay.
