Proposed IMS Architecture Matrix (Product Perspective)

Legend
Full, Two-way, Real-Time Sync
Partial Sync
Sync Not Supported
Pull = Pulling information from one platform to another in real-time
Pull = Pushing information from one platform to another in real-time
Changes Only = manual or scheduled changes only sync
Full Sync = manual or scheduled full sync
✅ Pull/Push Exists
🚫 Pull/Push does not Exist

Method × QBO Product Architecture SOT/Sync Matrix

Table	**Source of Truth (SOT)**	**QBO → Method** (Pull)	**Method → QBO** (Push)	**Notes**
Inventory Part Items	METHOD	✅ (Changes / Full)	✅ Changes / Full)	Method and QBO sync will continue to function as it does today when MLM goes live. However, one thing to note: Inventory part items created in QBO that sync to Method will have a location

				assigned to them by default.
				• On arrival in Method:
				  ◦ Default location assigned with location quantity = QBO QoH
				  ◦ Method QoH = QBO QoH

Non-Inventory Part Items	METHOD	✅ (Changes / Full)	✅ (Changes / Full)	Method and QBO sync will continue to function as it does today when MLM goes live.
Service Items	METHOD	✅ (Changes / Full)	✅ (Changes / Full)	
QBO Quantity on Hand (QoH)	QBO	✅ (Changes / Full)	✅ (Changes / Full)	QBO QoH may be shown as reference (read-only). This means we will continue to sync QBO QoH.
Method Quantity on Hand (QoH)	METHOD	🚫	🚫	Method QoH will exist within Method only. This figure will not sync to QBO or be affected by any updates to transactions/items in QBO including updates to QBO QoH.

				However, it is impacted by creations: Method Quantity on Hand (QoH) is only impacted in two cases: 1. when a new item is created in QBO and syncs into Method, or 2. during the very first QBO sync for a new Method customer. In both cases, Method QoH is initialized to match QBO QoH so that users can immediately begin tracking inventory in Method.
Available Stock	METHOD	🚫	🚫	QBO does not support; Method only.
Committed Stock	METHOD	🚫	🚫	
Expected Stock	METHOD	🚫	🚫	
Stock Adjustments	METHOD	🚫 (not synced today)	🚫	Method IMS feature; QBO has stock adj, but not synced today.

Sales Orders	METHOD	🚫	🚫	Not a native QBO object. Method only.
Purchase Orders	METHOD	✅ (Changes / Full)	✅ (Changes / Full)	Current sync will continue, however, 5 main call outs: 1. Methods sync with QBO will not change, this means all creations and updates to transactions will reflect in QBO where/when applicable. 2. Changes made to transactions in QBO will continue to reflect in Method 3. However, we will ignore all changes to transactions made in QBO that impact Method QoH, given a transaction has synced to QBO (i.e., it has a QBO
Invoices	SHARED	✅ (Changes / Full)	✅ (Changes / Full)	

				Transaction ID or the “Wait for Sync Approval” flag is unchecked) 4. Location field will be empty by default when transactions from QBO sync to Method. Only when the user goes in and adds a location for PO only and saves successfully, then Method QoH is updated. This allows the user to have accounting only transactions if they choose so. 5. Invoices and Sales Receipts are accounting transactions and have no impact to Method physical stock tracking
Sales Receipts	SHARED	✅ (Changes / Full)	✅ (Changes / Full)	

				quantities (Method QoH, committed, expected, available). 6. Given an Invoice that is linked to a SO in method was deleted in QBO when those changes sync to Method, Method QoH, committed, and expected stock remains unchanged and the accounting statuses related to the SO updates accordingly
Bills	QBO	🚫 (Changes / Full)	✅ (Changes / Full)	Bills are an accounting transaction and when created/updated/ or paid have no impact to Method physical stock tracking quantities (Method QoH, committed, expected, available).

				However, similar to Invoices if the bill is deleted in QBO that is linked to a PO in method then no impact to Method physical stock tracking and Status updates accordingly.
Locations (Warehouses)	METHOD	🚫	🚫	Not supported in QBO; Method only.
Location–Item Links	METHOD	🚫	🚫	Not supported in QBO; Method only.
Bins	METHOD	🚫	🚫	Not supported in QBO; Method only.
Location–Bin Links	METHOD	🚫	🚫	Not supported in QBO; Method only.

Key Callouts

- **Today:** Items, Invoices, POs, Sales Receipts sync 2-way with QBO.
- **Future IMS:** Method becomes SOT for QOH + new stock buckets (QOH, Available, Committed, Expected).
- **Never in QBO:** Sales Orders, Warehouses/Locations, Bins — these are **Method-only concepts**.
- **Audit Only:** QBO QOH remains visible for reconciliation, but not authoritative.

Method × Katana Product Architecture SOT/Sync Matrix (Simplest Form)

Table	Source of Truth (SOT)	**Katana → Method** (Pull)	**Method → Katana** (Push)	Notes
Inventory Part Items	KATANA	✅ (Changes / Full)	🚫	Items must stay aligned across both; Katana and Method. Need a one-time migration of data to Katana from Method. After only pull. One thing to note: 1. Katana does not have Non-Inventory Part items (NIP). This means Method NIP items sync to Katana as Service Items.
Non-Inventory Part Items	KATANA	✅ (Changes / Full)	🚫	
Service Items	KATANA	✅ (Changes / Full)	🚫	
Method Quantity on Hand (QOH)	KATANA	✅ (Changes / Full)	🚫	Katana is the SOT; Method displays only. We showing Method QoH with Katana values. From engineering perspective, the buckets are “Accounting” and “Inventory” as opposed to QBO, Katana and Method. This is analogous to our discussion where

				Katana becomes the SOT once it is connected to Method and 'Method becomes the new QBO in that relationship'.
Available Stock	KATANA	✅ (Changes / Full)	🚫	Katana is the SOT; Method surfaces for sales ops visibility.
Committed Stock	KATANA	✅ (Changes / Full)	🚫	
Expected Stock	KATANA	✅ (Changes / Full)	🚫	
Stock Adjustments	KATANA	✅ (Changes / Full)	🚫	Katana is the SOT for stock adjustments. Method logs and displays.
Sales Orders	METHOD	🚫 (Updates SO Status once fulfilled)	✅ (Changes / Full)	Sales orders created in Method sync to Katana for fulfillment. Once fulfilled in Katana we would want the status change in Katana to sync back to Method.
Purchase Orders	KATANA	🚫	🚫	Katana is the SOT for all actions related to Purchase Orders.

Invoices	QBO	🚫	🚫	Katana does not handle accounting.
Sales Receipts	QBO	🚫	🚫	Katana does not handle accounting.
Bills	QBO	🚫	🚫	Katana does not handle accounting.
Locations (Warehouses)	KATANA	✅ (Changes / Full)	🚫	Katana is the SOT for locations/bins; Method mirrors for sales ops. Need a one-time migration of location/bin data to Katana. After only pull.
Location–Item Links	KATANA	✅ (Changes / Full)	🚫	
Bins	KATANA	✅ (Changes / Full)	🚫	
Location–Bin Links	KATANA	✅ (Changes / Full)	🚫	

Key Callouts

- **Katana → Method (Pull):** Almost all inventory data flows from Katana (QOH, Available, Committed, Expected, Adjustments, Warehouses, Bins). Sync should support **incremental changes** for day-to-day ops, with a **full sync option** for onboarding/migration.
- **Method → Katana (Push):** Only customer-facing transactions, Sales Orders flow into Katana at the simplest form for this integration after initial migration of data to Katana.

Method × Katana × QBO Product Architecture SOT/Sync Matrix

Table	Method ↔ QBO	Method ↔ Katana	Katana ↔ QBO	Source of Truth (SOT)	Notes
Inventory Part Items	✅ 2-way (Changes/Full)	✅ 1-way (Katana to Method)	✅ 1-way (Katana to QBO -	KATANA	Katana remains the SOT for items.

			through Invoices/Bills)		
Non-Inventory Part Items	✅ 2-way (Changes/Full)	✅ 1-way (Katana to Method)	✅ 1-way (Katana to QBO - through Invoices/Bills)	KATANA	
Service Items	✅ 2-way (Changes/Full)	✅ 1-way (Katana to Method)	✅ 1-way (Katana to QBO - through Invoices/Bills)	KATANA	
QBO Quantity on Hand (QoH)	✅ 2-way (Changes/Full)	🚫	🚫	QBO	
Method Quantity on Hand (QoH)	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	Katana is the SOT for QoH. Method mirror values within our Method QoH.
Available Stock	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	Method mirror values within our Method Available Stock field.
Committed Stock	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	Method mirror values within our Method Committed Stock Field.
Expected Stock	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	Method mirror values within our Method

					Expected Stock Field.
Stock Adjustments	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	Katana manages stock adjustments. Method shows logs.
Sales Orders	🚫	✅ Method → Katana (Changes/Full)	🚫	METHOD	Method is the SOT for all actions related to Sales Orders. Katana consumes for fulfillment.
Purchase Orders	✅ 2-way (Changes/Full)	🚫	✅ Katana → QBO (→ Bills)	KATANA	Katana is the SOT for all actions related to Purchase Orders.
Invoices	✅ 2-way (Changes/Full)	🚫	✅ Katana → QBO (SO to Invoices)	QBO	Method creates invoices; QBO finalizes accounting;
Sales Receipts	✅ 2-way (Changes/Full)	🚫	🚫	QBO	Same as Invoices. Method front-office, QBO accounting. Katana does not allow you to create

					Sales Receipts.
Bills	✅ Method → QBO (Changes/Full)	🚫	🚫	QBO	Katana does not allow you to create Bills.
Locations (Warehouses)	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	Katana owns. Method mirrors.
Location–Item Links	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	
Bins	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA	
Location–Bin Links	🚫	✅ Katana → Method (Changes/Full)	🚫	KATANA
