Meeting records Transcript

## Summary

Paulette Dreher of SBS, a QuickBooks expert specializing in enterprise inventory clients, discussed challenges in inventory management, particularly the need for improved visibility and integration with third-party solutions like Katana. SBS clients desire seamless integrations and customized solutions, including features such as serial/lot numbers and multi-warehouse management, with a preference for a templated integration approach. Next steps include exploring shared access to client accounts (with consent) to improve Method's inventory solution and prioritizing integration with Katana.

## Details

- **Company Background and Specialization:** Paulette Dreher explained that SBS, formed over 20 years ago after they and their business partner were laid off, specializes in QuickBooks expertise for desktop and online platforms, with a niche in enterprise clients using inventory (00:00:00). Their focus has shifted due to Intuit's move to QBO, creating a need for better integration with inventory management solutions (00:01:11).
- **Inventory Management Challenges:** The most significant inventory challenges faced by SBS's clients revolve around inventory tracking, particularly in manufacturing settings with complex workflows involving multiple stakeholders (00:02:30). They highlighted the lack of accountability as a major issue, often leading to errors and the need for adjustments (00:03:57). They also noted that

many clients initially opt for large ERP systems, only to realize the complexity outweighs the benefits, leading them to seek more tailored solutions (00:06:30).

- **Client Needs and Feature Requests:** Clients primarily seek improved visibility into inventory at every stage, from sales to fulfillment (00:07:47). This need for visibility varies across different verticals and even within a single company, with different stakeholders (sales, field service, purchasing) having distinct requirements (00:10:24). Beyond visibility, clients often request customized estimates with additional data fields for profitability analysis and sales history (00:07:47).
- **Integration with Third-Party Solutions:** While SBS clients using QuickBooks Desktop generally find its features sufficient, those using QuickBooks Online often require integration with third-party inventory management apps such as Katana or SOS (00:13:18). A seamless integration, similar to the current Method-QuickBooks connection, is highly valued, but past experiences with third-party API integrations have been challenging due to lack of communication regarding updates (00:14:44). A templated integration approach would be highly beneficial (00:17:59).
- **Method's Current Inventory Solution and Future Improvements:** SBS has not received negative feedback on Method's current inventory system, which mirrors QuickBooks' capabilities (00:19:15). They believe Method's system is suitable for smaller companies needing basic inventory tracking but that larger companies requiring serial/lot numbers or advanced features would benefit from third-party integrations (00:20:53). Clients are generally receptive to customizations, finding them a strength of Method, although they do not typically perform them independently (00:22:29). For larger clients, key requirements beyond what's currently offered include serial/lot numbers, barcoding, and multi-warehouse management (00:25:10). To improve Method's inventory solution, Paulette Dreher suggested prioritizing integrations with third-party inventory management software, specifically mentioning Katana as a preferred option (00:26:25).
- **Customization and Client Collaboration:** SBS uses external developers for customizations (00:29:19). They suggested that sharing access to client accounts, with client consent, could provide valuable insights into user workflows (00:30:20). They offered to select appropriate accounts and share access or provide screenshots, potentially followed by a follow-up meeting (00:31:45).

## Suggested next steps

- [ ] Paulette Dreher will provide Phil Cote and John Miranda with access to example accounts showcasing various customizations and workflows, following up via email with account details.

# Paulette Dreher and John Miranda - Transcript

## 00:00:00

**John Miranda:** Okay, the meeting is being recorded now. And um my first question is I just want to get a little learn more about your background and a little bit about yourself before we uh dive into um um the objectives of this meeting.
**Paulette Dreher:** Um, so I used to be in corporate, got laid off a long time ago. My my uh business partner, same thing happened with her. So we decided to form SBS. We both had young children and um kind of struggled for a while, but best decision ever, right? and um QuickBooks was just kind of coming around and we were both um in in um accounting and corporate. So, we said, "Hm, let's kind of try QuickBooks." And then we tried u Sage, it was called something else back then. We, you know, we tried a couple and then over the years just kind of narrowed it down to to QuickBooks and um met Paul at one of the um one of the conferences and uh it was like yeah method this is you know we can do anything you wanted to do which nobody really got that that idea like what does that mean?

## 00:01:11

**Paulette Dreher:** But anyway, so everything's just kind of evolved and uh so we now specialize and I'm talking we started the company 20 odd years ago. Okay, so it it's been a while. Um but we narrowed everything down to being QuickBooks experts and we do desktop and online. um our niche or niche is um had been enterprise with inventory and uh we we have a lot of those customers but Intuit is moving to the the QBO.
**John Miranda:** Awesome.
**Paulette Dreher:** So um that's where the in well the inventory is not missing but that's where method is missing because you don't have an integration with uh you know let's say SOS katana um 9 something you know that's what's missing
**John Miranda:** Awesome. Well, that's a outstanding journey and um uh we'll get right into it then. I think uh for this meeting uh there's a couple of objectives that we'd like to

focus on um just to make it very purposeful. Um I think the first objective is you know to gain a deeper understanding into uh inventory management challenges your network faces.

## 00:02:30

**John Miranda:** The second objective is to you know gain insights into their current processes as well as their pain points. And the third objective you know is identify any features or integrations that would add the most value that your customers are looking for. So uh my c first question for you Pette is what are the most significant you know inventory management challenges your contacts are facing today uh with method or in general
**Paulette Dreher:** Um well I I guess the challenges are really um inventory tracking right because they um there's a lot of hands in in the process and if if they don't have a a documented workflow it easily. The salespeople are selling something that um is not in stock. I mean, that part is I guess sort of easy if you're just buying and reselling. But if you're manufacturing, then you have that whole whole workflow. So there's there's not one specific challenge. There's many, but they all center around the inventory tracking and then um if it's simple, then less challenges. But if you're manufacturing or you have uh you're selling uh something that requires a serial number or a lot number, that's huge.

## 00:03:57

**Paulette Dreher:** Um you have expiration dates for lot numbers. uh multi-warouses and um ultimately they screw up and they have to do inventory adjustments.
**John Miranda:** makes sense. Um and you're talking about workflows like can you like elaborate on like that type of workflow that type of process that these um smaller to like manufacturing bigsiz companies uh might uh perform on a day-to-day basis and like the type of system that they're looking for to you know solve that workflow.
**Paulette Dreher:** You can't put it into just a
**John Miranda:** Okay.
**Paulette Dreher:** couple of couple of sentences. It really just depends on the size of the company and how many people uh you know it all starts with sales. Well, or the salespeople think that you know they're they're the top, right? And I suppose they are, but but it's the people at the bottom that have to make sure that they have the product

for the salespeople to uh to sell. So that can get very complicated. Who's in charge of doing purchase orders? And um is it just one person?

## 00:05:09

**Paulette Dreher:** Is it multiple people? Um actually one of the biggest challenges is there there's no accountability for like when we do method or even when we when we're just doing QuickBooks and and one of the reasons kind of digress but um the reason that we really um like Method and we encourage uh Method is because we want to keep non-financial people out of QuickBooks. Okay, that's where the biggest mistakes are made. So using something like method, you could say, all right, salespeople, they have their role. They're going to do quotes and then they have to check on their inventory to make sure is it there? If it's not there, how long does it take to order it or if we have to make it, what are the ramifications and what's the schedule of that? So now you start getting a little bit more complicated in the workflow because if you're making it um then let's say you know that it takes two weeks to make but do we have all the the components because if we have to order components in order to make it now it's not two weeks it could be three weeks or four.

## 00:06:30

**Paulette Dreher:** So that's a huge that's a huge challenge and um we've actually been a we've been successful in in customizing method and doing and setting up QuickBooks and a variety of ways to address that because the the client's first thought is oh I have to go to Oracle or Fishbowl or something and it's like no no no because yes he can but do you really need all the features of an enterprise system or a and what's happened is we actually take a lot of people off Netswuite because they go there, they think it's going to solve all their problems. It's too complicated because they don't use all the features and then they want to come back
**John Miranda:** Awesome.
**Paulette Dreher:** and then they come back and we say, "Okay, now tell me exactly what you need." And that's the part that we do in that
**John Miranda:** And
**Paulette Dreher:** all works on the desktop. Okay.
**John Miranda:** G got it. Got it. And uh you're talking about like um this uh flow how like

users come um they go to like these big ERP systems, realize they don't use all those features, they come back to you and ask for these types of customizations.

## 00:07:47

**John Miranda:** Uh could you elaborate more on like what type of what types of features are these customers looking for that you know um allow them to complete their job to be done and are extremely valuable for their workflow?
**Paulette Dreher:** There there's so many. I mean, every client thinks, you know, they think they're reinventing the wheel and it's like, no, come on. Like it it's everybody's accounting is accounting and that's sort of how how like even the salespeople should be like like there's different nuances but it's not not so different. But then they just go crazy and they say, "Well, you know, we'd like you to customize the estimate because actually something that we do really a lot is um on the estimate they ask for different columns so that they you know they can see the profitability or or uh how often they um how often they sell that product. So, if somebody says, "I want widget A," they um underneath the the line item on on the estimate, they could type in widget A and see um what they have in stock, how often they they've sold it in whatever their time frame is.

## 00:09:15

**Paulette Dreher:** They might have a field to say, well, how long does it take us to make it or how long be if we place a purchase order? So that's different for every company, but it's sort of the same. They ask for it in different ways. Could be on the estimate, could be that they want to see it someplace else. Um we've done a we've created a bunch of different packs for customers because they first ask for it sort of like um on a list screen, right? let's let's type in that item and then show me x amount of data. Then they say, "Okay, well this is really good. Can you put it on the estimate or oh now on the sales order, show me the history not of that item but of that customer." Okay. And and on and on it goes.
**John Miranda:** So it seems like visibility is a big factor that that our your customers are looking for with um their IMS solution, right? Like visibility into their inventory at every stage of like the pipeline, right?

## 00:10:24

**Paulette Dreher:** Yes.
**John Miranda:** Got it. Got it. And um a follow-up question to that is um would you say like out of your network of your customers which types of verticals are you know are looking for this types of you know visibility more? Is it like um uh like um manufacturing warehouse distribution? Is it uh field services? Uh what's your experience into this?
**Paulette Dreher:** Um, you know what? It it really varies. Um, I I can't tell you that it's any particular vertical.
**John Miranda:** Okay.
**Paulette Dreher:** It's just, um, it, you know, today, uh, I mean, I have an appointment a little later today and it's somebody that we've been doing customization for about almost a year and a half. And they sell um Xerox and uh printers and and and print um copy machines like all that all those electronics to big companies and uh so they use the field service but they want all this the sales wants all the visibility but then the the field service supervisor he wants something else on that side.

## 00:11:42

**Paulette Dreher:** So it could be two, three people that are requesting visibility, each one concentrating on on their own piece. The purchasing manager may want to see something on the uh on the purchase orders and then receiving uh the inventory where sales doesn't care about that, wants to see it a different way and field service again wants to see something else. So, um I I can't I know you're trying to sort of ask specific questions, but it it's just it really all depends.
**John Miranda:** No, I appreciate it, Pette. Um, I think um other than visibility, are there any other like pain points um that you can talk about uh that your contacts face um on a day-to-day? Um just want to understand like you know uh the challenges um if you could be more a little bit more specific.
**Paulette Dreher:** Um, no actually I can't I I I think pretty much regarding inventory that that's it. It's the visibility to know the um what's on hand, what the schedule is, and when they can they sell it, the you know the like oh we do a lot of um price lists.

## 00:13:18

**Paulette Dreher:** We do price lists that are different from what QuickBooks might do because the client wants it a different way.
**John Miranda:** Uh, got it. And um I think uh the point I'm uh question I have in mind right now is that um would your customers like your contacts value with like integrations with other inventory management solutions or um because it sounds like like I mentioned earlier that they're moving away from these ERPs and looking for just like kind of like an out of the box that can um uh combine with their CRM. Is that correct? Or like is integration something that they see value in as well.
**Paulette Dreher:** only if they're using the QuickBooks online because the QuickBooks enterprise desktop has everything they need. Um, so, uh, if there was anything that you could could do in method to help the desktop client would be potentially to allow them to do a build in uh, in method for the manufacturer, but I think that's probably not worth it because it's too complicated to get, you know, all the ducks in a row.

## 00:14:44

**Paulette Dreher:** Um but I I think the desktop is fine. The integration is you need to be able to to um integrate with one or more uh online inventory apps so that they are comfortable moving to um QuickBooks online specifically QuickBooks online advanced because an enterprise client will would not move to the lower versions of online. they um I I would propose that they go to the advanced and uh while the advance can track simple inventory, you know, purchases increase, sales decrease, but that's it. So then we have to recommend a third party and we're partner with a couple of them, but they don't integrate with methods. So we it it's just it's a moot point unless we do the API and we did it once and it worked but we had so many headaches because every time that a third party app made a change they're not going to let us know because we're we're the little guy right? If method integrates with them, just like intuitit lets method know whatever, it lets lets you know behind the scenes. If you integrated with with a third-party app, they would let you know so that you could make any any changes.

## 00:16:21

**John Miranda:** Got it. So you had that experience of integrating before but since we

were like the small player we weren't uh know aware of like these changes that had being made so the sync wasn't happening. That's what you referred to
**Paulette Dreher:** Right.
**John Miranda:** right?
**Paulette Dreher:** I mean, it's still active. It it's
**John Miranda:** Yeah.
**Paulette Dreher:** we we're we successfully took care of it and and
**John Miranda:** Yeah.
**Paulette Dreher:** it's fine, but the um the amount of phone calls, the amount of support, the edits, it's um yeah, I I just wouldn't do it again.
**John Miranda:** Got it. Got it. What if you were able to create an integration that's almost seamless? Would that be something that um your contacts would um enjoy using?
**Paulette Dreher:** Well, yeah. I
**John Miranda:** Okay.
**Paulette Dreher:** I mean that's, you know, just like when um you know, if you could give us something like um how QuickBooks and Method connect
**John Miranda:** Mhm.
**Paulette Dreher:** and sync. Yeah. So, it's just really a matter of who are you going to choose or you know even better because I mean the API is is basically in the most simplistic terms it's just a mapping of okay this field here equals this field there right so if you properly map them and then do your technical thing it's um I don't know it's If you could have a couple of templates, either you choose somebody or you choose multiples and

## 00:17:59

**Paulette Dreher:** you create like an integration template that with a little bit of tweaking would fit, you know, multiples. That would be awesome.
**John Miranda:** Cool. And um are are you aware of like uh which um I guess uh inventory management uh product like SOS, Katana or or your contacts prefer using or um like if you understand my question.
**Paulette Dreher:** They don't care. They really listen to us. Okay. So, um I happen to like Katana better. Uh
**John Miranda:** Yeah.
**Paulette Dreher:** I SOS is great. it. But to me, it has like an older feel. Just visually, it has an older feel. And um I just think for the, you know, people your age and younger that are getting into this,

**John Miranda:** Yeah.
**Paulette Dreher:** they want something slick on the phone. They they they're not going to like it. Okay? And um that's probably unfair because we are partners with SOS and we do have clients there. But I I if I can I recommend uh Katana

## 00:19:15

**John Miranda:** Makes makes sense. Makes sense. Cool. Um I think uh a question that I did have was uh I guess focusing on our methods current inventory solution we have right now which is mainly just like our items app. How that translates with each uh step in the pipeline. Um, do you have any feedback that your customers have regarding our current state of our IMS system?
**Paulette Dreher:** Um, no. I mean, it's, you know, it pretty pretty much mirrors what you can do in um in QuickBooks. So it's um yeah I I I wouldn't I don't see that as uh needing any enhancement
**John Miranda:** Okay. Interesting. So like um um in your experience, let's say you have like a smaller player, right? Like a smaller uh company that's you know has only like uh their inventory is maybe just like books or um uh furniture, right? Um would you say that our current system is suitable for that scale of a business or like I I know understand that there's multiple factors involved but um like what areas are need need to be focused on for us to be you know uh suitable for you know um uh varying sizes of companies like um because I think that's something that we talked about recently just um uh different companies have different complexity with their items, right?

## 00:20:53

**John Miranda:** So, if our current systems revolves around like um QuickBooks online very well, like is that suitable in your opinion or no for like a smaller size company?
**Paulette Dreher:** Yeah. I I mean it's but Okay, smaller size company that if they don't need um any complexity then the QuickBooks online increases decreases inventory and any bells and whistles can be done in method, right? As long as ultimately they only on they only need um plus plus and minus. Okay. I mean it if you think about it, you could probably we haven't done it, but in a hypothetical uh environment, we probably
**John Miranda:** Oops.
**Paulette Dreher:** could track serial or lot numbers uh in method and and that would be

fine. Okay. Except that when you get into serial number or lot numbers, typically the company has additional requirements. And so that's why I think that a third-party inventory app is necessary, but not always. Okay, we and we have clients that vary from, you know, two, three, four employees to something that, you know, hundreds of employees and I mean, we have one method user that uh I forget how many users they have, but they have about 60 users.

## 00:22:29

**Paulette Dreher:** So, you know, there companywide they're pretty big and um so I think method in its current state can address pretty much you know from small to to larger um because you can customize it. So, um Yeah.
**John Miranda:** Cool. Um I know like one of the pain points that at least from our research is that customizations is kind of like a problem that a lot of users face like uh they can pay a standard a flat rate for a fully out of the box system like Katana SOS but with method um for things like um you know they would assume to be out of the box functionalities are not and they require customizations and is Um, from your experience, are are users like, you know, fond of customizations? They're okay with that just if they just require a certain amount of features to complete their job to be done. Like, um, what's your experience with that?
**Paulette Dreher:** Um we haven't really found any any push back on that. I I mean we have uh we work with multiple um developers and I mean we have clients that we do customization with and like I mentioned the one that we've been customizing for about a year and a half.

## 00:23:57

**Paulette Dreher:** They actually like it, right? They like that it's and we try to like say wait a minute, you know, don't paint yourself into a box. like let's not overdo the customization, but it's it it allows two companies that are in the exact same industry to do things differently if they want or it's they can, you know, they're very similar. So, um yeah, I I haven't seen any any issues at all. I think that's a strength.
**John Miranda:** Yeah,
**Paulette Dreher:** Now
**John Miranda:** that's

**Paulette Dreher:** I will tell you that um not a single client of mine has done any um customization on their own. Okay. And we we've got we have quite a few clients and a lot that you know over the years that there's a attrition but uh not a single one has ever successfully done. They may try they may try to do like a report or oh I've gone in and you know I just wanted to add this field but they added it as a text field and it doesn't go to QuickBooks.

## 00:25:10

**Paulette Dreher:** You know something silly. So, um, anyway, that's my take on that.
**John Miranda:** You know, for Sure. Uh customization is one of our biggest selling points for our company and it's nice seeing that your contacts are uh very pro customization and uh to get their jobs completed. Um I think one of the questions I do have on my mind is uh for these bigger players, these bigger uh verticals, companies. Um uh I know we talked about you know like lots, serial codes, we talked about advanced like inventory tracking, managing multiple warehouses. Is there any other like you know like musth have um features that these types of companies want like in an in an inventory solution or are those like the main ones that that they look for
**Paulette Dreher:** Um that yeah that's pretty much it. it it's quantity schedule um lot serial number barcoding multiple warehouses um yeah I mean somebody always comes up with something else that they want but you know across the board I I can't really think of anything
**John Miranda:** Cool. Okay.

## 00:26:25

**John Miranda:** And um I know we're um coming up on time, but I think my final question is um as a kind of like a creative question for you, Pette, but like in your opinion um what would success look like for an inventory management solution here at Method?
**Paulette Dreher:** I don't I don't think Okay, I disagree with you trying to create an inventory solution. Okay, it's you already have it. You already have it for the desktop. I wouldn't mess with it.
**John Miranda:** Okay.
**Paulette Dreher:** I will concentrate on what can we do for the online
**John Miranda:** Okay. And um primarily focusing on the online, how would that look like

for you if you could answer that? If not, it's fine, too.
**Paulette Dreher:** get me an integration with Katana, you know, pick one.
**John Miranda:** Yeah.
**Paulette Dreher:** Pick one. Um, so we actually um I have a call actually with Katana uh tomorrow because my rep from well not Katana another company my rep from Katana left and is now working for
**John Miranda:** Heat.
**Paulette Dreher:** Katana's top reseller who happens to be an integration company and they do a lot of integration and they successfully have done um an integration with method and so They're going to demo it for me tomorrow to show me what they've done.

## 00:28:01

**Paulette Dreher:** I think they only have one client on it, but they they've done something and it and it works well. And basically the integration um in its simplistic form would be let me be able to see um quantity on hand um integrate uh sales orders. And what you have to do is you have to change in katana or any of them the um the item is an inventory item. In QBO they change it and make it non-inventory. So that that presents a problem because then QBO to method it's a non-inventory item, right? So you have to change that. you almost have to ignore the QuickBooks items and pick up the items from the uh third party. So, sales order and um items so that you you could see you have that visibility and that's probably all you need.
**John Miranda:** Wow, that's uh honestly very interesting. I I would love to know how that integration is going for for that company with Katana and um how successful that looks like for them.
**Paulette Dreher:** Sure.
**John Miranda:** Um, I know we're uh at 10:30.

## 00:29:19

**John Miranda:** Um, that's all my questions, but Phil, did you have any questions for Pette as well or
**Phil Cote:** Uh yeah, I had a just a couple quick ones, Pette, if you don't mind, unless you have uh if you have to run.

**Paulette Dreher:** No, I'm good. I don't have an appointment until 11.
**Phil Cote:** Okay, perfect. Um so just one thing I wanted to confirm. I think I already know the answer to this, but I wanted to confirm. So you mentioned uh customizations that you um kind of set up for for these accounts that you work with. Just want to confirm. Do you perform these yourself?
**Paulette Dreher:** Oh god, no. I I know just enough to be dangerous. So I I I know enough that I can do some um back in the day uh method used to have training classes. Been up to Toronto a couple of times. Um we used to have you know there used to be training
**Phil Cote:** Right.
**Paulette Dreher:** and um but then I can't do everything and it's not really my thing.

## 00:30:20

**Paulette Dreher:** So, it's um uh I I have two developers that that I work with and so I you know contractors and I I send them the work and they get it done and yeah
**Phil Cote:** Okay, perfect. Um and then one thing um just kind of following up on this meeting and I guess um some of the stuff you shared which has now prompted kind of some other questions. Um so you one thing you mentioned is that for each of these accounts the customizations relating to inventory management end up being somewhat unique for each kind of account. Um, I was wondering like obviously it wouldn't be today. At some point in time, if you're able to, would there be some accounts that you work with where either yourself or the account admins and users if they might be able to walk John and I through the different flows in their account? Um, you know, you mentioned the different personas like the sales reps, um, the, um, purchase managers, that sort of thing. If it would be super helpful to see a few examples of these accounts and these people, how in their day-to-day jobs they kind of interact with these customizations and uh solutions.

## 00:31:45

**Paulette Dreher:** Um, yeah, I I um I'll keep it in mind. Do me a favor and shoot me an email on that. And um this is a bit of a busy time for us because everybody is coming out of the January February doldrums
**Phil Cote:** Right.
**Paulette Dreher:** and oh we got to get you know we got to get going. But uh if you shoot

me an email I'll certainly think about it and we'll see you know who we can get to uh to kind of walk you through and what accounts uh would would be you know appropriate.
**Phil Cote:** Sure. Sounds good. Um or you know if anything if it's kind of too busy to to sort of like walk us through um if you're comfortable with it could be as simple as just like giving us the names of a couple accounts and then with your permission if we're able to kind of um take a look in there that could be helpful as Oh,
**Paulette Dreher:** Okay. And maybe that's better. uh let me think of which what accounts uh would be good and then I could email you back like yeah take a look at these screens and you can kind of get the gist of it and then um maybe we can have another meeting just to kind of answer any questions about

## 00:33:02

**Phil Cote:** right. Okay. Yeah, I think I think that probably sounds like the the best approach um for everyone so it it doesn't take up too much of anyone else's time and we can kind of take a first look and then um start kind of generating generating some of these questions uh that we can ask afterwards.
**Paulette Dreher:** Um, okay. That sounds good.
**Phil Cote:** Perfect. Um so yeah, we can send you an email just to kind of uh confirm that if you if you'd like. Um
**Paulette Dreher:** Yeah. If
**Phil Cote:** but
**Paulette Dreher:** I don't have an email, Phil, it's it's just gone because I write down notes and then my papers are, you know,
**Phil Cote:** Yeah.
**Paulette Dreher:** it's
**Phil Cote:** No, I I completely understand. I I'm the same way. So, I I get it. Um cool. So, that that would be that would be very helpful. Um I think that would be a great kind of followup to um the initial kind of information you just gave us today.
**Paulette Dreher:** And if you you know if you you come up with any questions after this meeting again feel free to shoot me an email and I'm happy to answer them.
**Phil Cote:** Perfect. That sounds great.
**Paulette Dreher:** All righty.
**Phil Cote:** All right. Well, uh I don't know if you have any questions for us.
**Paulette Dreher:** Um no. Not at this time.
**Phil Cote:** Perfect.
**Paulette Dreher:** All right. Thanks guys.

**John Miranda:** Awesome. Thank you so much, Paulette for your time. Really appreciate
**Paulette Dreher:** Thank
**John Miranda:** the insights.
**Paulette Dreher:** you. Bye now.
**John Miranda:** Okay, but
