Prototype Testing Feedback:

Tester: Charvi

What were the biggest challenges or frustrations you encountered while using both prototypes?

Native Solution:
- Why do I have to select a warehouse per Transaction Line for it to Save? What if I don't do Warehouse Tracking
- Usually, Serial Numbers = 1 per quantity
    - Location Tracking maybe should be a grid and not fields per Item
- What is distribution in inventory management modal?
- An inventory shows Yellow color if we're low on stock, but when you click on it, it shows the available quantity in green. Should I worry or feel safe?
- I saw that the source system dropdown was available on both prototypes and that being the only difference between the both. So I wasn't really able to find much of a difference
- Would it let a user override unavailability and place sales orders on backorder? Seemed like it would but how would it notify people of backorders?
- What if I have a Sales Order and that changes the inventory number and then I invoice the Sales Order and then that changes the numbers again? Maybe you took care of this one since in the video I attached, I was not able to see a change in the inventory numbers after creating a sales order and marking it as shipped or delivered.
- Shouldn’t inventory just be based on Invoices and Bills?
- PO automation is something I did not even realise was there until I read it on one of the questions above. I guess it needs more visibility because I went back to the prototype after reading it here and still couldn't find it.

Hybrid Solution:
- I am unsure of what the Status dropdown means on the Hybrid Item Grid? Very confusing

What improvements or additional features would you suggest to enhance the user experience for both prototypes?

- An import solution on the grid to import inventory into an Item (separate from the import tool)
    - This is because a lot of times, inventory serial numbers are not reused. So when a customer buys new inventory, they need to import/update all new serial numbers in the database. Any automation for that will help. For example, I sell game tickets. Each ticket if for a different seat and for a particular game. Once that is sold, I'm never selling that again.
    - So maybe, even a status column per serial number to mark it as sold

- Advanced functionality that we can enable or disable
- be able to select the serial numbers on the line level of a transaction - when selling

- Automatic emails reminding them of low stock numbers?
- Back Orders? Items need to be ordered, already ordered and on a PO,
- Not sure what the PO automation is doing because I wasn't able to find it

Based on your experience with each prototype, which solution would you prefer for our inventory management solution?

If we have fully functional inventory system that is native, we can sell a one-stop solution and eliminate customers' extra subscription costs with all these other software.
It's also a lot easier to debug problems or get responses on tickets when our own team is working on it, instead of working with other teams to get answers.

How easy was it to navigate the **Hybrid Prototype**? *

	1	2	3	4	5	
Very Difficult	○	○	○	◉	○	Very Easy

How easy was it to navigate the **Native Prototype**? *

	1	2	3	4	5	
Very Difficult	○	○	○	◉	○	Very Easy

To what extent do you agree with the following statements for the **Hybrid Prototype**? *

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The prototype's design reflects my expectations for an effective inventory management solution.	○	○	○	◉	○
The layout and organization of features supports our customers workflow.	○	○	◉	○	○
The integration points (e.g., syncing with external systems) are clearly communicated in the interface.	○	○	◉	○	○

To what extent do you agree with the following statements for the **Native Prototype**?

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The prototype's design reflects my expectations for an effective inventory management solution.	○	○	○	◉	○
The layout and organization of features supports our customers workflow.	○	○	○	◉	○

Which of the following features did you find the most valuable? (Choose a maximum of 4) *

- [x] Real-Time Inventory Visibility
- [ ] Third-Party Integration
- [x] Multi-Warehouse Management
- [ ] Detailed Location Based Tracking (lots, bins, zones, aisles, etc)
- [ ] Serial Number Tracking
- [x] Dynamically Insert, Rearrange, and Edit line Items
- [x] Reorder Points & Low Stock Alerts
- [ ] Purchase Order Automation
- [ ] Inventory Reports
- [ ] Other: _____

How important is each feature for our customers daily operations? *

	Not Important	Slightly Important	Moderatly Important	Important	Extremely Important
Real-Time Inventory Visibility	○	○	○	○	◉
Third-Party Integration	○	○	◉	○	○
Multi-Warehouse Management	○	○	◉	○	○
Detailed Location Based Tracking (lots, bins, zones, aisles, etc)	○	○	○	◉	○
Serial Number Tracking	○	○	○	◉	○
Dynamically Insert, Rearrange, and Edit line Items	○	○	○	○	◉
Reorder Points & Low Stock Alerts	○	○	○	◉	○
Purchase Order Automation	○	○	○	○	◉
Inventory Reports	○	○	○	○	◉

How likely are you to recommend our **Hybrid Prototype** solution (if refined) to a client? *

	1	2	3	4	5	6	7	8	9	10	
Not at all likely	○	○	○	○	○	○	◉	○	○	○	Extremely likely

How likely are you to recommend our **Native Prototype** solution (if refined) to a client? *

	1	2	3	4	5	6	7	8	9	10	
Not at all likely	○	○	○	○	○	○	○	○	○	◉	Extremely likely

Based on your experience with each prototype, which solution would you prefer for our inventory management solution? *

- ◉ Native (In-House inventory solution)
- ○ Hybrid (Combines native inventory management features with integration capabilities)
