Prototype Testing Feedback:

Tester: Ryan

Information I called out from watching recording:

- Adding items to a transaction is a pain with the “+”
- Likes create purchase order flow

What were the biggest challenges or frustrations you encountered while using both prototypes?

There weren't too many challenges - I think the flow is pretty straightforward in terms of building out transactions and selecting where the items are coming from.

There definitely needs to be restrictions on this in the case that the business is run out of 2 different provinces for example and we don't want to be pulling items from 2 separate warehouses at the same time

100% need the ability in my opinion to create sales orders and and reserve stock if none is currently available to get the order past the estimate stages

What improvements or additional features would you suggest to enhance the user experience for both prototypes?

I would say the 2 big things are:
1. creating sales orders to reserve stock or having some way of seeing items that are coming in and sales orders that are waiting for stock to be invoiced and sent. pending stock status' etc. Once you receive that PO being able to allocate
2. Ability to see an audit trail per item and per warehouse on where X quantity of item came from, where it went to, what happened etc.

Based on your experience with each prototype, which solution would you prefer for our inventory management solution?

Native, but I think Hybrid could work for lots of businesses that are willing to incur an additional cost or even integrate a shipping experience with a 3rd party. If we aren't integrating shipping into this I would say that if we could nail down the features this would be easier and cheaper for companies to solely use the native solution

How easy was it to navigate the **Hybrid Prototype**? *

	1	2	3	4	5	
Very Difficult	○	○	○	◉	○	Very Easy

How easy was it to navigate the **Native Prototype**? *

	1	2	3	4	5	
Very Difficult	○	○	○	◉	○	Very Easy

To what extent do you agree with the following statements for the **Hybrid Prototype**? *

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The prototype's design reflects my expectations for an effective inventory management solution.	○	○	○	◉	○
The layout and organization of features supports our customers workflow.	○	○	○	◉	○
The integration points (e.g., syncing with external systems) are clearly communicated in the interface.	○	○	○	◉	○

To what extent do you agree with the following statements for the **Native Prototype**?

	Strongly Disagree	Disagree	Neutral	Agree	Strongly Agree
The prototype's design reflects my expectations for an effective inventory management solution.	○	○	○	◉	○
The layout and organization of features supports our customers workflow.	○	○	○	◉	○

Which of the following features did you find the most valuable? (Choose a maximum of 4) *

- [x] Real-Time Inventory Visibility
- [ ] Third-Party Integration
- [x] Multi-Warehouse Management
- [ ] Detailed Location Based Tracking (lots, bins, zones, aisles, etc)
- [ ] Serial Number Tracking
- [ ] Dynamically Insert, Rearrange, and Edit line Items
- [x] Reorder Points & Low Stock Alerts
- [x] Purchase Order Automation
- [ ] Inventory Reports
- [ ] Other: _____

How important is each feature for our customers daily operations? *

	Not Important	Slightly Important	Moderatly Important	Important	Extremely Important
Real-Time Inventory Visibility	○	○	○	◉	○
Third-Party Integration	○	◉	○	○	○
Multi-Warehouse Management	○	○	○	○	◉
Detailed Location Based Tracking (lots, bins, zones, aisles, etc)	○	○	◉	○	○
Serial Number Tracking	○	○	◉	○	○
Dynamically Insert, Rearrange, and Edit line Items	○	○	◉	○	○
Reorder Points & Low Stock Alerts	○	○	○	○	◉
Purchase Order Automation	○	○	◉	○	○
Inventory Reports	○	○	◉	○	○

How likely are you to recommend our **Hybrid Prototype** solution (if refined) to a client? *

	1	2	3	4	5	6	7	8	9	10	
Not at all likely	○	○	○	○	○	○	◉	○	○	○	Extremely likely

How likely are you to recommend our **Native Prototype** solution (if refined) to a client? *

	1	2	3	4	5	6	7	8	9	10	
Not at all likely	○	○	○	○	○	○	○	○	◉	○	Extremely likely

Based on your experience with each prototype, which solution would you prefer for our inventory management solution? *

- ◉ Native (In-House inventory solution)
- ○ Hybrid (Combines native inventory management features with integration capabilities)
