Europena: Method Feedback / Chat with Noor & Evelin

Invited Noor Shamji Evelin Hodges John Miranda Thomas Darlington from Method:CRM

Attachments Europena: Method Feedback / Chat with Noor & Evelin

Meeting records Transcript Recording

Summary

Eve described their primary use of Method as a highly customized CRM for two separate companies that integrates data from QuickBooks, emphasizing the benefit of tailored reporting and data cleanup processes, as noted by Noor Shamji's observation of the intense customization. Eve explained to John Miranda that their previous workflow with Fishbowl inventory management caused data friction due to items coming into QuickBooks as generic "Fishbowl items," necessitating a transition to Marov for one company to better align with QuickBooks data. Despite occasional sync conflicts and a lengthy workflow, Eve affirmed that the ability to customize Method and its integration with QuickBooks, along with its useful mobile view and granular user permissions, are the main reasons they continue to use the platform, and they agreed to participate in future beta testing for a native Method inventory solution.

Details

- **Customization and Reporting in Method** Eve highlighted that the ability to customize Method, particularly the reporting side, is the greatest benefit, allowing them to tailor it to their needs. Their setup involves two separate companies with

mirrored systems, integrating data from QuickBooks and customizing applications, such as the "companies app," to focus on activities and opportunities (00:00:00). Noor Shamji noted that the reporting seemed intense and highly customized compared to a normal platform (00:01:11).

- **Method Usage as a CRM and Data Cleanup** Eve confirmed they primarily use Method as a CRM, and customization helps manage contacts and prevent "dirty stuff" from accumulating due to multiple users inputting data (00:01:11). Eve mentioned that Thomas provided assistance in creating a cleanup process within Method to identify and address duplicates, which is crucial due to their parent-child data structure. They also use the audits app to view store-level information, including pictures and notes, and frequently utilize opportunities and activities within Method (00:02:10).
- **QuickBooks Synchronization and Data Flow** Eve explained that the value proposition for their company is not the two-way sync but rather pulling data from QuickBooks to provide sales reps and contacts with necessary data without exposing the entire accounting structure (00:03:16) (00:13:38). While they use a variety of Method features like web-to-lead and a customized rolling data app, they do not frequently use the accounts app (00:02:10). Eve recalled that before they began customizing Method, people were reluctant to use it due to initial glitches and occasional data sync issues (00:04:22).
- **Transitioning from Fishbowl Inventory Management** The company previously used Fishbowl for inventory, which transferred data to QuickBooks Desktop (00:05:22) (00:07:21). The primary issue with Fishbowl was that all items, including credits and disbursements, came into QuickBooks labeled as a "Fishbowl item," necessitating customization and manual input of descriptions in Method. They are currently transitioning the second company (Company 2) from Fishbowl to Marov, which is expected to align better with their QuickBooks data structure, minimizing the need for extensive customization (00:05:22) (00:09:21).
- **Inventory Workflow and Data Friction** Eve provided John Miranda with a detailed workflow where sales orders were generated in Fishbowl, inventory was managed there, and upon shipment, the data was synced to QuickBooks for invoicing (00:08:17) (00:10:19). John summarized that Fishbowl was used for order and fulfillment management, while QuickBooks was used for accounting, and Eve affirmed this (00:11:34). The main friction point was the necessity to manually add descriptions because data from Fishbowl came into QuickBooks

as a "Fishbowl item" in the memo field instead of the correct description (00:08:17).

- **Reasoning for Choosing and Maintaining Method** Eve stated that the integration with QuickBooks was one of the main initial reasons for choosing Method. Although they considered switching, the continued use of Method is driven by the fact they can customize it, especially for reporting, and they have invested substantial time into its development (00:13:38). The current business model is food distribution, but they are transitioning toward manufacturing (00:15:23) (00:22:23).
- **Importance of Mobile View and Field Adoption** The mobile view on iPads and phones is important for their sales reps, particularly for the audits app and the web-to-lead feature, which they use frequently at trade shows to gather customer information (00:14:35). Eve mentioned that their future plans might involve invoicing directly out of Method, potentially requiring the addition of more apps, but this is still in the pipeline (00:16:14).
- **Current Accounting Workflow and User Permissions** The company currently invoices directly from QuickBooks and integrates those invoices into Method. Accounting functions are kept separate from Method usage because their sales reps do not handle accounting; purchase orders are sorted out at the head office (00:17:16). Method is primarily used by sales reps for viewing their numbers, logging activities, and opportunities, and sending copies of sales orders, with no accounting access (00:18:24). Eve praised Method's user permissions, noting that they are able to customize who sees what data, even restricting sales reps from seeing each other's numbers, which maintains security over private accounting data (00:19:37).
- **Current Workflow Challenges and Future Inventory Solution** Eve reported that the main challenge with Method is occasional sync conflicts where numbers initially appear incorrect until a second sync is run, though they acknowledged improvements in the last few months (00:20:30). The biggest general friction point in their workflow is the large number of steps involved in the process, from POs to final invoicing, and they seek a shorter, streamlined process (00:23:20). John confirmed that Method is working on a native inventory solution, which is a major feature for 2025, and Eve agreed to participate in future beta testing for this feature (00:24:47).

Suggested next steps

- [ ] Noor Shamji will send the inventory-related survey questions from John Miranda to Eve via the existing email thread.
- [ ] John Miranda will reach out to Eve in the future for inventory testing or to be part of a beta release for the new inventory feature that the vertical app experience team is building.
- [ ] Eve will answer the inventory-related survey questions that John Miranda is sending over.

Europena: Method Feedback / Chat with Noor & Evelin - Transcript

00:00:00

Noor Shamji: Okay.
Eve: And the I think for us the the greatest thing is because of the kind of model we have is the fact that we are able to customize um especially the reporting side um customize it to what we would like to use it
Noor Shamji: Right.
Eve: for and what would like to see. So um we have actually the two two companies uh
Noor Shamji: Correct.
Eve: company one company two that we have those are two like two different companies but we have like almost the same thing so we can kind of mirror depending on how our data comes in from from from QuickBooks. So there's a bit of like difference between the two but we can kind of mirror every every app that we're using. So, we have like new apps that have come up that we have actually like also customized. Like we have the company's app, but we customized it to what we'd like to see. So, we'd like to see more activities, more opportunities,
Noor Shamji: Mhm.
Eve: um, and just being able to link those things together. So, I I love the fact that we're able to get in there and just and just customize everything to our needs.

00:01:11

Noor Shamji: Okay. Yeah, that's amazing. Yeah, we went through your account a little bit and we saw um the reporting.
Eve: I
Noor Shamji: The reporting seems pretty pretty intense and pretty customized as opposed to what you'll see in like a a normal platform. Would you say like reporting is the the major thing that you use method for? Is there anything else that you feel like is is important

Eve: Okay. So,
Noor Shamji: here?
Eve: obviously like I said like the as you we use it as a CRM. So, for us like our contacts and being able because what happens is when we have a ton of people putting in contacts and all that,
Noor Shamji: Right.
Eve: we end up having a lot of like dirty stuff in there. And so the fact the customization again, the fact that we've able to we've been able to go in there and um get like
Noor Shamji: Mhm.
Eve: a our cleaning done because of also of the way our our data is is is because we have like the parent and the child in in in in our setup and so it kind of just makes it a bit more difficult but in terms of

00:02:10

Noor Shamji: Mhm.
Eve: like when putting in like our context and stuff.
Noor Shamji: Yeah.
Eve: So, we've been able to well, Thomas has been able to help us to just create um uh a cleanup as well, like how we could just clean up, see duplicates and all that stuff. So, that kind of just helps um keep everything clean and streamlined what we kind of looking at. We're also able to have the audits in and alo if you saw that um the audits app and it really helps us see what's happening at store level pictures and and um and
Noor Shamji: Yeah.
Eve: the notes that we want and we're able to go back you know
Noor Shamji: Yeah. Yeah.
Eve: into like like the the older the older stuff. So I like that we can play around with it and and like we use a lot of opportunities as well. We use a lot of activities. We use that a lot.
Noor Shamji: Mhm.
Eve: um web to lead we've been using it much um I think in the last two years more effectively and we've also customized it because of the way our data

00:03:16

Noor Shamji: Yeah.
Eve: is so we use quite a bit so yeah uh we don't really use
Noor Shamji: Yeah.
Eve: accounts a lot that's more um admin side of things so we don't really like use that much and I think we've kind of just taken out a lot of the stuff that we don't need. But we also have another app which is rolling data which is very important to us.
Noor Shamji: Mhm.
Eve: Um that is also customized um app as well.
Noor Shamji: Okay. Okay. That's that's cool.
Eve: Yeah.
Noor Shamji: That's actually a little bit different cuz usually we get we get people who uh you know really want to take advantage of that QuickBooks and Method two-way sync and not just you know transfer from QuickBooks to method.
Eve: Yes.
Noor Shamji: Um, and that's kind of like the value proposition, you know, like we have a two-way sync, like data syncs back, but I feels like the data sync back isn't uh the important part here.
Eve: Yes.
Noor Shamji: It's about just pulling from QuickBooks and then having your either your sales reps or any anyone from your contacts being able to see the extent of data that they need as opposed to just the entire accounting.

00:04:22

Eve: Exactly. I think the only um so before I took um on the project of just getting taking care of method and just making like getting it customized to what we wanted, people didn't like using it a lot. Um and that's because there was like a lot of like glitches in the beginning.
Noor Shamji: Okay.
Eve: That was before like Thomas started, you know, working with us with it. So I think sometimes it has this thing of forgetting forgetting stuff.
Noor Shamji: Yeah.
Eve: So like uh I don't know if it's if I'll say again but like sometimes it just wouldn't bring in the data. I don't know if it was it's something to do with the sync. So we had like a bit of issues with sync conflicts but ever since we've like been actively

Noor Shamji: Right.
Eve: working on it we have made strides like we have
Noor Shamji: Yeah,
Eve: Yeah.
Noor Shamji: that's awesome. That's amazing. You mentioned another app. Are you using another app for inventory? I think Thomas mentioned Fishbowl, but I'm not sure if you guys are still on it or you're planning on migrating from it.

00:05:22

Noor Shamji: We wanted to talk a little bit about that. Like, is that how how does that
Eve: Okay. So,
Noor Shamji: work?
Eve: we have we've been using fishbowl and then fishbowl then transfers the data to QuickBooks. Um,
Noor Shamji: Okay.
Eve: but the way that the data was structured as well, it was more everything just became like a fishbowl item. So it doesn't it didn't matter like what kind of a if it's the actual product or if it's um credits or if it's dispersements everything just came in as like a fishbowl item. So we had to kind of customize it to that.
Noor Shamji: Yeah.
Eve: But so that was just for the one company. The other company is we do the company one we do our things directly in QuickBooks but now we're switching over with the fishbowl. We're switching over to Marov. Um, and from the emails back and forth and what I've looked at when they sent me stuff is that it's more like how the QuickBooks is. So, the structure of how our data is in QuickBooks. So, we shouldn't have a big like it shouldn't be too much customization that would have to do.

00:06:22

Eve: It will just probably be like mirroring exactly how our comp the one company is that already works with uh with
Noor Shamji: Right. Okay. Okay. So,
Eve: method.
Noor Shamji: would you say like the specific um maybe friction point with fishbowl was

the um the items and the customization around that and those things like that's why we were moving to
Eve: Yes. Yes.
Noor Shamji: market.
Eve: Well, for us for for us it was a lot of I'm not sure what was the main reason of us immigrating
Noor Shamji: Okay.
Eve: to fish, but I guess um when it came to message that was one of the things is like the description that wasn't in the description was under like a memo and then so that kind of just we had to kind of just play around with with uh customizing stuff to make sure that like we get all that data in and it it gave a bit more work because now we have to kind of put in descriptions instead of is getting everything out of out of QuickBooks cuz whatever came out of QuickBooks from Fishbowl just said Fishbowl items.

00:07:21

Eve: And so we now had to go and now put in description so that's we have the correct
Noor Shamji: Right.
Eve: um
Noor Shamji: Oh, that's that's very interesting. In fact,
Eve: numbers
Noor Shamji: John and just the team, he's they're working on a solution for uh imagery management within method. It's it's not ready yet, but we're working on it. I'm wondering, John, did you have any questions around that? You definitely know more about this product than I
John Miranda: Thanks. Thanks, Nor. Uh,
Noor Shamji: do.
John Miranda: hi Eve. Nice to meet you.
Eve: Nice to meet you,
John Miranda: Um, yeah, I'm on the um the vertical app experience team at Method and we've been building out an inventory
Eve: John.
John Miranda: solution, a native solution for our customers. And I'm curious about uh that painoint that you mentioned between Fishbowl and uh QB uh you said QBO QuickBooks online, right?
Eve: Desktop.
John Miranda: Oh, desktop. Okay.

Eve: Yeah.
John Miranda: And uh you mentioned there was like data inconsistencies like what was the data that you wanted to sync over from fishbowl to um QuickBooks desktop if if you

00:08:17

Eve: So we sync basically we sync everything into QuickBooks.
John Miranda: know
Eve: So from like a sale sales order invoices uh well the invoices were created in QuickBooks but then everything came in so inventory came in from fishbowl. Um, so all our sales orders we we generated them from Fishbowl into into QuickBooks, but then the way that that the data came in was it came in as a memo.
John Miranda: Okay.
Eve: So it came in as a fishbowl everything fell under fishable item. So when it got into QuickBooks, it then became just so when like instead of s like if I wanted to search like for example one of our products citrus and lemon it wouldn't I I'm not able to pull it out as citrus and lemon but I have to go in and pull it out under the memo under fishable item and then just kind of download everything and then and then start sorting it out from there cleaning out the data. So the way that we were receiving that data is was a bit like more difficult now when we're trying to get it into method.

00:09:21

Eve: Now from QuickBooks to method it's it's it's it's it's everything is coming in as a fishbowl item under description. I don't know if you understand what I mean.
John Miranda: No, I I totally understand. I can see the frustration uh with that.
Eve: Yeah. Yeah.
John Miranda: It's
Eve: So that was frustrating because now we have had to then manually go in and put in in the description.
John Miranda: almost
Eve: We actually need to put in the actual item because we're dealing item by items as opposed to everything just being a fishbowl fishable
John Miranda: Makes sense.
Eve: item.

John Miranda: It's almost triple the amount of work when it should just have been once,
Eve: Yes. And so Marov apparently we we haven't started using it yet but they are going to be able
John Miranda: right?
Eve: to um have everything as under description under the right run right when it when it gets into QuickBooks it gets in under the correct description box and we'll be able to just get it out of
John Miranda: That that that's awesome to hear.
Eve: there.
John Miranda: Um and uh a question I had was uh I understand like your company does uh barbecue sauce distribution across like US and Canada.

00:10:19

John Miranda: Um do you mind like walking me through like how that workflow looks like in Fishbowl?
Eve: Yes.
John Miranda: like uh like from the beginning from an order to I guess distribution like how do you guys use fishbowl and integrate that into uh QuickBooks online to uh met the entire workflow if you don't mind me
Eve: Okay. So, a workflow how it worked before with the fishbowl that was that's the company too.
John Miranda: asking
Eve: It would be we get in our our PO and then we enter it into Fishbowl. We enter the sales order in in Fishbowl. We uh get the inventory out of Fishbowl and then when that's done, when the when the product is shipped, we then um sync it so integration into QuickBooks. And in QuickBooks, that's when it'll pick up the name of the uh the customer name. it picks up the products and everything and now that's where we did the invoicing. So invoicing would be done in QuickBooks. So it would come into into QuickBooks um as an invoice but then then we'll just change a few things and then that invoice is what then goes is integrated into into method.

00:11:34

John Miranda: I I see. Okay. So, basically you're using fishbowl for basically order as

well as fulfillment management and then QuickBooks for
Eve: Yes,
John Miranda: accounting for the accounting of
Eve: for Yes, for the accounting bit and then into into method.
John Miranda: it.
Eve: But the other company, company one is different because we're are doing we are we have our um our sales order in there and then we turn it into an invoice and then all of that is then integrated into into method an inventory.
John Miranda: Gotcha. So like the typical flow would look like
Eve: So, we're really basically using QuickBooks for everything for the accounting bid and the inventory
John Miranda: a
Eve: and the first processes and the second.
John Miranda: makes sense. So like um the flow would look like uh you get an order and then uh you ensure you have
Eve: Yeah.
John Miranda: the right amount of inventory. You would pick, pack it,
Eve: Yes.
John Miranda: ship it and then uh get the sales uh sync the sales order, sync the invoice uh into accounting and then uh the accounting and get paid is how

00:12:35

Eve: Yes. Yes. Yes.
John Miranda: you guys work.
Eve: Yes.
John Miranda: Okay,
Eve: Yes.
John Miranda: makes sense.
Eve: Yeah.
Noor Shamji: Okay.
Eve: So with Marov it's going to be the same except that the way the data is coming in will be let me let me not say it might be the same. I there may be a few different things. Um, we're still looking into it, but it looks like we we just the data is going to come in to QuickBooks like how it is already now with when it's when you start um your sales order from QuickBooks. That's how I understand that's how our data is going to be coming in.
Noor Shamji: Right. Okay, that makes sense. Thank you, Ellen, for walking us through

that. I know that's a lot. Um, if I could just maybe zoom out a little bit just to understand like the choice for method. I understand the customization has really, you know, helped out a lot. Seems like other platforms don't really have that flexibility. And that's kind of what we try to convey to to other customers like you too or like prospects.

00:13:38

Noor Shamji: And I want to understand like when you first or you or maybe someone on your team um decided to use method, was it that specific customization factor? Was it QuickBooks? Because I think the two-way sync is not really something that we're looking at because we're not doing accounting on Method. We're just doing just pulling in from QuickBooks. So maybe that was it. Maybe not. Just to understand what what came to that decision of choosing method as as a CRM.
Eve: I think it's QuickBooks. QuickBooks was one of the main reasons.
Noor Shamji: Okay.
Eve: and then we could have changed, but then the fact of the customization and the fact that we've already done quite a lot of work in it, it just made sense. I know um it was 50/50 in terms of like
Noor Shamji: Yeah.
Eve: should we keep it, should we not, but I think the biggest thing that we have now is the fact that we're able to customize it and get like reports and stuff. That's what has really made us keep it.

00:14:35

Noor Shamji: Amazing. Okay.
Eve: Yeah.
Noor Shamji: Yeah,
Eve: and the fact that we're still using QuickBooks,
Noor Shamji: that
Eve: but I'm sure there's other platforms that can, but the fact that we can,
Noor Shamji: yeah,
Eve: like we've already put a lot of invested a lot of time into it,
Noor Shamji: of course.
Eve: and the fact that um yeah,

Noor Shamji: Yeah.
Eve: we're able to customize it to what we want,
Noor Shamji: Yeah.
Eve: that
Noor Shamji: Yeah. Yeah. And the reports look stunning.
Eve: works.
Noor Shamji: Like the like the trend analysis, seasonality analysis. I mean, it it seems like a lot of work was done there. It might not just be easy to switch over at this point.
Eve: Yes. Yes. Absolutely.
Noor Shamji: Amazing. Okay, that's cool. That's cool. Um uh I also I think uh Thomas mentioned uh about your um I think you have field reps or just like sales rep that use like the auditing platform or app that you guys have created.
Eve: Mhm.
Noor Shamji: So in terms of like mobile or I think is it like on an iPad that you guys use it?

00:15:23

Noor Shamji: How important is that real world adoption um for just I want to say manufacturing because it seems like you guys are like a food distribution correct me if I'm wrong or just like
Eve: Yeah,
Noor Shamji: a distribution.
Eve: that's correct.
Noor Shamji: Yeah. Yeah.
Eve: Yeah,
Noor Shamji: So like how important is that?
Eve: but we're going to get we're getting into manufactur. Yes.
Noor Shamji: Oh
Eve: Uh I think the iPad we we we actually needed to make sure that we the
Noor Shamji: okay.
Eve: view of the iPad is correct because of the audits for sure, but also because we use the web lead a lot. So we we get we go into um I think you've seen this with email campaigns that come from like um the opportunities that we we've gathered from the web to lead. So that we use a lot like so the view of the phone and the view of the iPad is very important to us especially because we use the web to lead to get like those customers in when we're actually at shows.

Noor Shamji: Yeah.

00:16:14

Noor Shamji: The trade shows, right?
Eve: Yeah. The trade shows.
Noor Shamji: Yeah.
Eve: So we definitely um use a lot of that the iPad for that and um the phone as
Noor Shamji: Okay. Okay. Okay.
Eve: well.
Noor Shamji: That's amazing. And yeah, you you mentioned um I think uh I was told this as well, you guys are getting into maybe manufacturing now. What is what is Yeah,
Eve: Yeah.
Noor Shamji: what does that look like?
Eve: Um that's where I think Marco is coming in. Um, so I'm not yet I I'm not yet at that place where I know exactly how we're going to be u managing inventory and things like that,
Noor Shamji: Okay.
Eve: but um I'm looking at a future where we'll be able to invoice out of method directly like from the customer out on into into method
Noor Shamji: Right.
Eve: somehow.
Noor Shamji: Right.
Eve: Yeah.
Noor Shamji: Okay. Okay. Cool.
Eve: But I think that I think that we're going to have to add quite a bit more. um apps in ter depending on like what direction we're going to still something in the pipeline.

00:17:16

Eve: So we don't have like so much information on it
Noor Shamji: Right.
Eve: yet.
Noor Shamji: So, currently you're invoicing directly out of uh QuickBooks, is that right?
Eve: Yes. out of QuickBooks and then we just integrate into

Noor Shamji: Okay. Okay. Okay. So, so that accounting piece like uh just knowing the product again bit more surface level than
Eve: method.
Noor Shamji: maybe John would know, but um accounting feels like a big part of why a lot of customers use method like whether it's to send estimates or quotes or anything around that. Is there do you know if there's any reason you guys haven't pivoted into that from reporting and kind of stuck to QuickBooks?
Eve: um the accounting bit I think it's because I think it's just the culture that we have um and maybe just it maybe it could have just been a trust issue but also the fact that alo one of the main things as well is the fact that our sales reps don't do anything to do with accounting so every like they send us all the POS and the POS are uh uh sorted out here in the head office.

00:18:24

Eve: So that's where I think all the workflow is but more this what we use method
Noor Shamji: Yeah.
Eve: for is more for the sales rep. So they have more access to just being able to see their numbers. So that's how it is at the at the moment.
Noor Shamji: Yeah.
Eve: So it's more of a preference,
Noor Shamji: Okay.
Eve: a company preference. They prefer that method is used by the sales person. they don't get to um touch too many things or change a lot of things and then everything is done in one place in
John Miranda: So if your sales reps are using uh method primarily,
Eve: QuickBooks.
Noor Shamji: Okay.
John Miranda: who would be using uh the QuickBooks uh desktop as well as the fishbowl?
Eve: So the logistics logistics um admin so pretty much the people that have putting in those um POS in creating the sales orders um
John Miranda: Okay.
Eve: putting in uh on the and then on the inventory side um the buyers and all that those are the ones that are using Fishbowl and QuickBooks and then the sales reps are just really using method um as a view just to be able to see stuff to see and pretty much put in the activities and opportunities and nothing to do with any accounting.

00:19:37

Eve: It's just for them to be able to see and send out what they already have. If they want to send out like a sales order copy of it to the customer that, you know, as as a confirmation, then that's what they're using. So,
Noor Shamji: Okay.
Eve: our sales reps don't get to use QuickBooks. It's um there's a department that does all of that processing of
Noor Shamji: Right. Right. Right. So, like you said, like security or maybe user permissions with the amount of data that they can see and
Eve: Yes. Yes. Oh, yeah.
Noor Shamji: see.
Eve: And that's one of the things that we like about method is the user permissions at least that um I know it's it's a lot of um apps have them,
Noor Shamji: Yeah.
Eve: but the fact that we're able to just tweak them around and customize them to what we want that helps a
Noor Shamji: Amazing. Okay.
Eve: lot.
Noor Shamji: Yeah. Yeah, that makes sense because sometimes accounting data is it's it's private. You don't want everyone to have access to

00:20:30

Eve: Exactly.
Noor Shamji: those.
Eve: Not even at some point we had them not seeing each other's numbers which was good. So we customized them seeing what they need to see.
Noor Shamji: Yeah. Okay. That's awesome. That's awesome. That was actually going to be my next question.
Eve: Yep.
Noor Shamji: Like did you have anything like very I I know you spoke about customization. I see your account. It feels heavily customized with the reporting and that looks really good. But like anything else that you feel like okay method is really

good with this. I think you answered that with easy permissions. We can go with the other one of challenges or like anything you you feel like I wish method had had this um it would make our life easier kind of thing.
Eve: I I think for us it's more when it just gives those sync conflicts and then sometimes like stuff is not coming in like there's sometimes when you when you wake up and like you know uh the numbers are not correct but then if you do another sync you do a sync and then maybe the numbers are not correct and then you do another sync and then all of a sudden the numbers are correct.

00:21:25

Noor Shamji: Anyway,
Eve: So that's I think the but in terms of like lately to be honest like I've double triple checked my numbers what's in QuickBooks and what's in method just to see and we're
Noor Shamji: Okay, that's cool. Yeah, I know.
Eve: good.
Noor Shamji: I think it's just been four or five months since we have that sync widget on there. It's it it's proven to be helpful for a lot of customers. I'm wondering if you feel the same.
Eve: Yes, I I've definitely seen some change in the last like couple of months for sure.
Noor Shamji: Awesome. Awesome. That's amazing. Is there anything else that you would want to Again,
Eve: Yeah.
Noor Shamji: I'm just going to reiterate in in terms of the industry, would you call yourself like a food distribution or just other businesses in your space? Is it food distribution? Is it specialty food distribution? Is there anything specific in terms of terminology that you guys use to describe your
Eve: Oh,
Noor Shamji: business?
Eve: food distribution is is perfect.

00:22:23

Noor Shamji: Okay,
Eve: Yeah.

Noor Shamji: perfect. Okay.
Eve: But then transitioning into into uh actual manufacturing, food manufacturing.
Noor Shamji: manufacturing. Yeah. And then maybe the the invoicing and the connection with markup will be handy at that
Eve: Y at that point.
Noor Shamji: point.
Eve: So I'm unfortunately I can't really answer a lot about Marco right now because we haven't started using it and we're still actually in the stages of just trying to put in data and stuff but I know I've already sent some stuff
Noor Shamji: Yeah. Just
Eve: to Thomas as to how the data is going to be coming in.
Noor Shamji: Okay.
Eve: Um I hope that you you know that might help as
Noor Shamji: Yeah. Yeah, definitely. Definitely. I'll check in with him.
Eve: well.
Noor Shamji: I think that that's about it for me. John, did you have anything that we might have
John Miranda: Uh I just have one quick question.
Noor Shamji: missed?
John Miranda: I know like distribution is like very important to your business. Uh do you guys distribute out of like multiple locations or just like one singular like uh warehouse or uh site

00:23:20

Eve: So it's is one for so so it's for the two different companies two different um uh distribution centers but they have it's just it's just really just everything comes out of one. So company one comes out of the one distribution center and company two comes out of one one distribution
John Miranda: Okay. No, that makes sense. And um just uh if there's like one major friction point within like your current
Eve: center
John Miranda: workflow uh like what would that be for your team?
Eve: um in method or just just maybe QuickBooks or generally
John Miranda: uh in in general like um just want to get a a bird's eye view.
Eve: I think I think we have a lot of steps.
John Miranda: Yeah.

Eve: I think I think we have a lot of steps. It would be nice to cut them down honestly.
John Miranda: Basically like a streamlined
Eve: Um Yeah.
John Miranda: process.
Eve: Yeah. like a streamline process because now we have um so it's it's the invoice in the PO then we get the sales order then we have to create the invoice and then we have to go back and then we check with the inventory and then if it's missing and then after that we have to then change that invoice around and and then then and and make it a final invoice and then before it's sent out and when we don't send out our invoices from QuickBooks as well.

00:24:47

Eve: So that's other thing. We don't we don't send it out from QuickBooks.
John Miranda: Yeah. No, that that does sound like a lot of uh hoops to,
Eve: Yes.
John Miranda: you know, jump through, right?
Eve: Yep.
John Miranda: Um
Eve: So streamlining I if if if method would be able to streamline you know um our processes to make them shorter but more accurate. I mean they are accurate but just make them shorter that would really help.
John Miranda: Well, uh, we're working on that. That's something that the past 2025 is something that inventory has been a big, uh, uh, feature that we we're trying to ship. And, uh, you seem to be the perfect customer to at least like try this out. Uh, so, um, do you mind if like we reach out to you in the future for like inventory testing or being part of like a beta um beta release?
Eve: Absolutely.
John Miranda: Okay,
Eve: No problem at all.
John Miranda: that's amazing. I do have a newer like I do have like the survey it just relates to some inventory related

00:25:39

Eve: Yeah,
John Miranda: questions that only takes like five minutes to um answer.
Noor Shamji: Yeah.
John Miranda: Do you mind if I send that over to newer and then you can follow up?
Noor Shamji: Yeah.
Eve: sure. No, go ahead.
Noor Shamji: For for sure.
John Miranda: Okay.
Noor Shamji: For sure. We have a we have an email thread on here.
John Miranda: Amazing.
Noor Shamji: Let me just add you on there and I'll send you Yeah.
John Miranda: Okay.
Noor Shamji: So,
John Miranda: Amazing.
Noor Shamji: you can just share those there.
John Miranda: Thank you. Thank you.
Noor Shamji: Okay.
Eve: Perfect.
Noor Shamji: Amazing. Thank you so much, Evelyn. We're going to be respectful of your time. We asked for only 30 minutes. Um, we're we're good,
Eve: No problem.
Noor Shamji: but this was really helpful and thanks for talking to
Eve: No worries. I hope I was help. I know.
Noor Shamji: us.
Eve: I know. I was Yeah. I hope I helped.
Noor Shamji: Absolutely. Absolutely.
Eve: I love method.
Noor Shamji: I think John can attest to that.
Eve: I like it. It's like my baby.
Noor Shamji: Oh,
Eve: So,
Noor Shamji: wow.
Eve: it's Yeah.
Noor Shamji: Wow. That's That's great to hear. That's great to hear. Especially for someone like John who's working day in and day out on the product. I'm sure they Awesome. Okay. Thank you. Thanks for your time, Evelyn. All right.
