Summary

John Miranda, ScottK, and Patrick Kelly discussed OSAP's B2B model of manufacturing custom, low-volume tool control shadow boards and their current use of Method for quoting and sales orders, which integrates with QuickBooks for financials, inventory, and pricing. OSAP utilizes HubSpot for all CRM, marketing, and service functions, as they found it better suited for their needs than Method's CRM. The main pain point discussed was the current time-consuming, manual process for quoting, which involves manually exporting data from their custom "blue manager" software to Method, a process they aim to automate via the API to improve accuracy and prepare for business growth, a goal driven by ScottK.

Details

- **Introductions and Roles**: The meeting began with introductions, with John Miranda facilitating the session and meeting ScottK, the General Manager of OSAP, and Patrick Kelly, the Customer Success Manager. ScottK handles the software aspects of OSAP's services and confirmed they have been integrating with the API to utilize their services more. ScottK also noted that Scott Lever handles quoting and works within Method on a daily basis (00:00:00).
- **OSAP Business Overview**: OSAP manufactures shadow boards from foam or plastic materials, which customers use for tool control in high-stakes environments, such as preventing tools from being left in a jet engine (00:01:11). Their product also helps businesses be "lean" by ensuring factory workers only

have necessary tools. OSAP is unique because they focus on custom, low-volume orders (quantities one to several hundred) and utilize technology like image capture, phone apps, and a product database (00:02:06).

- **Business Model and CRM Use**: OSAP is primarily a business-to-business (B2B) company and relies on distributors to handle some aspects of the business, as acquiring new customers can be difficult due to their technology. They currently use Method for quoting and generating sales orders, and they use HubSpot for all customer relationship management (CRM) functions (00:03:22). Method acts as a buffer integrated with back-end services like QuickBooks, preventing direct access to that system (00:02:06).
- **Reasoning for Using HubSpot over Method CRM**: OSAP has tried multiple CRM systems, including Salesforce, and settled on HubSpot about one to two years ago as it currently meets some of their needs (00:04:26). Patrick Kelly explained that they utilize HubSpot for the marketing side, managing web pages and their knowledge base, which includes a connected chatbot. HubSpot also serves the service side for tech support, ticketing, tracking activities, and supporting marketing efforts like drip campaigns (00:05:37).
- **The Method and Manufacturing Workflow**: The workflow begins with their custom back-end software called "blue manager," which serves as the project management area and stores customer and project data (00:06:32). Data is currently exported manually from "blue manager" and imported into Method to generate quotes, a process chosen over using QuickBooks because Method offers features and customization. Once a customer places a purchase order, the order desk generates a sales order in Method, which is connected to QuickBooks, and then manufacturing is managed back in "blue manager" (00:07:32).
- **Financial and Inventory Processes**: Once an order ships, the accounting team handles all invoicing and payments within QuickBooks, as they prefer to live in that system and do not currently feel comfortable moving this function to Method (00:07:32) (00:22:14). All inventory, part numbering, and pricing are also controlled in QuickBooks Desktop Enterprise, and Method pulls this information back in when needed (00:09:48). Shipping is handled externally using separate systems and apps for carriers like FedEx and UPS, which involves a manual process for obtaining tracking numbers (00:10:47).
- **Current Improvement Goals and Pain Points**: ScottK noted that their custom "blue manager" software is central to their operations, excluding financial and

inventory data, and they are now working to improve and potentially automate quoting by using the API to connect contacts and generate quotes. The company's goal, driven by the General Manager over the last two years, is to prepare for growth by improving processes like quoting, inventory control, and shipping, as quoting is currently a time-consuming and painful manual process (00:11:56).

- **The Impact of Alex's Customizations**: ScottK highly praised "Alex" for resolving previous performance issues and bugs in Method's initial customization, stating that having Alex on a monthly basis to tweak and correct things has been a huge improvement (00:14:15). Alex has been instrumental in fixing complex quoting rules, adding simple but impactful features like the ability to copy and edit quotes, and helping to set up the API (00:15:23).
- **Addressing Manual Processes and Data Accuracy**: Patrick Kelly noted that their focus is on reducing manual efforts, especially around quoting, to save time and improve accuracy, as human involvement introduces risk (00:16:26). The current manual process involves exporting data, using a CSV file, and manually ensuring customer information, shipping addresses, and pricing rules are correctly linked and applied within Method, which is a tedious task with many points for mistakes (00:17:45). They are currently working on alleviating this pain point (00:19:55).
- **Method Users and Future Feature Requests**: Users of Method include the estimator (Scott), the production coordinator/order desk person, and the sales team, who use it to view generated quotes (00:19:55). Future work with Alex will focus on generating forecasting and commission reports through Method. They are also considering bringing the invoicing piece over to Method, but this requires securing buy-in from the accounting team, who are reluctant to adopt a new system outside of QuickBooks (00:21:03).
- **Ideal Automation Scenario**: When asked for a fantasy change, Patrick Kelly described a goal where the project is finalized in "blue manager," and pressing a single button automatically creates the quote in Method. A second button push in Method would then confirm the quote and send it out via HubSpot with the quote attached, replacing what currently requires hundreds of clicks (00:23:17). Achieving this scenario requires extensive testing and quality control to ensure the accuracy of the financial numbers (00:24:32).

Suggested next steps

- [ ] John Miranda will reach out to the group in the future to ask questions, run ideas by them, or involve them in inventory testing.

Pat Kelly and John Miranda - Transcript

00:00:00

John Miranda: All right. Amazing. Uh maybe we can do like a round robin just like introduce yourselves. I just introduced me. So, uh Scott and Patrick
ScottK: Yeah,
John Miranda: like
ScottK: I I'll go first. I'm uh Scott Colstrom, the uh general manager of OSAP, and also I handle all the uh software aspects of our services and stuff. Um, so yeah, we've been using I've been actually starting to um connect to your API and everything too. So we're actually starting to utilize your services even more. Um, so that's been very helpful. Um, and then I'll introduce Patrick Kelly here, our customer success manager. Um, and then Scott Lever handles a lot of our quoting stuff. So he's actually working inside method on a daily basis.
John Miranda: W That's amazing. And um we also have another Scott here.
ScottK: Yeah,
John Miranda: Is he Oh,
ScottK: that was Scott Wever uh handling the coding and stuff.
Patrick Kelly: Yeah.
John Miranda: sorry. Sorry. Uh my um my internet lagged right there.
ScottK: Yep.
John Miranda: My bad.

00:01:11

John Miranda: Um okay, that's amazing.
Patrick Kelly: Yeah.
John Miranda: Nice to meet you three. Um and thanks for taking some time again. Um the first thing I really want to understand is you know can you give me a background of more about the business? So what does OSAP do? What do you guys um you know sell

to customers? Who do you sell to? And um I just want to know more about your business in general and the industry you operate
ScottK: Yeah.
John Miranda: in.
ScottK: Um, so I can speak to that. The, um, so OSAP actually, uh, manufactures, um, shadow boards. We can do them in foam or plastic materials. So a shadow board's generally used by customers that need to do tool control. So if you can imagine your toolbox in your garage or something, you open it up, we create foam to put all the tools and keep them well organized. Um, we have a lot of other industries that, you know, at the end of the day, they have to make sure all their tools are back.

00:02:06

ScottK: You don't want something left in a jet engine or something. So, it's pretty critical process. Um, another aspect to using our product is people want to be lean. So, uh, people out on the factory floor, they're only given the tools they need. They're not given extra tools and things that could get lost. So, those are kind of the main reasons for using our product. Um the thing that makes us unique is we're on the custom low volume side where there's a lot of other companies out there doing much higher volume stuff but very difficult to compete in our space and our software helps enable that. Uh we can do from quantities one to several hundred um no problem. Um so that kind of helps drive us. We also have really good technology for image capture of tools and parts and we got um software on the phone and apps, product database, all that kind of stuff. Um so where we're using method for is um kind of integrating to our back-end services like our Quickbooks and stuff where we don't want um people having direct access to that system.

00:03:22

ScottK: Uh so methods given us a nice kind of buffer between that. Um we generally use it for quoting uh and generating sales orders. Um we do have many systems. Um so we're actually now like I said trying to tie in so that we can kind of connect even more data and process um with methods. So um the other thing um is we use HubSpot for all our CRM. So we don't utilize method for that. So hope that
John Miranda: Gotcha. Yeah. No, that that's uh that's great.

ScottK: helps.
John Miranda: And uh one one thing I just want to touch on is um do you do you guys primarily sell to other businesses or
ScottK: Yeah, we're B2B.
John Miranda: consumers?
ScottK: Um we kind of struggle B to C. Um it's because of our technology and stuff. A lot of times it's a little difficult to get um brand new customers going. um we rely on distributors and stuff to handle that aspect of our business. So yeah, pretty much
John Miranda: Makes sense. And you mentioned that you rely on HubSpot for CRM and then method for more of the

00:04:26

ScottK: B2B.
John Miranda: quoting and the sales order aspect. Is there any reason why you rely on HubSpot when method is also a CRM for that
ScottK: Um so we've gone through many CRM systems.
John Miranda: instance?
ScottK: Um I wasn't here exactly when we first started you using method uh or I wasn't involved I should say. Um so I don't know what parts were lacking back then. Um we had originally gone with a system might have been Wix or something like that for ticketing and that kind of stuff and I think we've been on HubSpot for about a year or two. We've tried Salesforce all this. So, we've been kind of going around and right now we're just kind of focused on HubSpot. It's sort of filling some more of our needs, but um still a little challenge. So, um so yeah, we have a a lot invested in that now, too. And and I don't know how much you've been It looks like Method has been adding more and more features, too, and we're just not paying attention to it. So, apologize for that.

00:05:37

John Miranda: that that's totally fine and that's why this call is here you know to talk to the customers and understand what are the gaps in our product and you mentioned that HubSpot is meeting those specific needs what needs uh were you talking about specifically
Patrick Kelly: Well,

ScottK: Um, so,
Patrick Kelly: we use it I can talk a little bit about that.
ScottK: oh, go
Patrick Kelly: We So,
John Miranda: Yeah.
ScottK: ahead.
Patrick Kelly: we're using it on the marketing side. We're using it to to manage some of our web pages. We use it to manage our knowledge base. We have a chatbot on our website connected to our knowledge base. It's really helpful for that. Um and it's easy to add new knowledgebased articles. Uh I we use it on the service side for um tech support and ticketing and tracking our activities around there. Um their new help desk makes it easy to do that. Um and then marketing uses the database for beyond that for drip campaigning and and things like that.

00:06:32

Patrick Kelly: So, uh, I think those are those are the key ways that we're taking advantage of
John Miranda: No, that that makes sense. And um we currently do have a team uh called the core um CRM experience team that are
Patrick Kelly: it.
John Miranda: trying to make that experience a lot better. And a lot of things that you did mention are current gaps with our product which is why I can see that you do rely on another CRM to solve those needs.
Patrick Kelly: Mhm.
John Miranda: So thanks for you know going in depth there. Um,
Patrick Kelly: Mhm.
John Miranda: one question I did want to go back on is you mentioned how um, in in method you focus on, you know, the quoting and the sales orders. Is it possible you can walk me through like a a real customer workflow for how um, an order comes in uh, to um, distribution? So from end to end and how that looks from your process and into method and out.
ScottK: Yeah. So we have our own custom software for our back end which is also for our project management area.

00:07:32

ScottK: We call it blue manager.
John Miranda: Yeah.
ScottK: So a lot of the projects and data for the customers reside there. That system currently manually exports project and part numbers and we manually import them into method to generate our quotes. Um we also don't use QuickBooks for that because um it's lacking some features that Method has and of course customizing everything has been awesome especially working with Alex has been really helpful. So we do all our estimating there. Um once that goes to the customer um and a purchase order comes in our order desk will then go to back to method and generate a sales order from that which again it's connected right to QuickBooks. Um and then from there we go back to our system blue manager for all the manufacturing aspects and everything. Um once the order ships um it the order goes to our accounting people and accounting people live in QuickBooks and they have other systems and things they're using. So all the invoicing and payments and everything are just done in QuickBooks. Um we've talked a little bit with Alex about trying to push some of that back to method but they our accounting team doesn't feel com comfortable and of course it would be another system for them.

00:08:56

ScottK: So that's why we're really just focused on quotes and uh uh sales orders and and you've been doing a great job with it.
John Miranda: makes sense. So,
ScottK: So
John Miranda: um, just correct me if I'm wrong, if I understand the flow. So, uh, typically a customer makes an order on your website that generates a quote
ScottK: Oh, I'm sorry. Yeah.
John Miranda: that
ScottK: So they first come with a need and and we have to go through a design process.
John Miranda: Okay.
ScottK: So, we actually design the shadow board for them and we kind of do it for free and we'll give them an approval PDF and we give them the quote so they can see how much it's going to cost and then if they decide to order it, yeah, then they're placing the order. But it all starts with um a design process through our
John Miranda: Makes sense. And once they do confirm that they want to move forward,

ScottK: portal.
John Miranda: that's when that purchase order is created for I would assume like the materials um needed to create the shadow box.

00:09:48

ScottK: Yep.
John Miranda: Okay. And then um you would source all the materials. You do you guys receive them into like a central warehouse or location where the manufacturing occurs?
ScottK: So all our inventory and part number everything is controlled in QuickBooks right now.
John Miranda: Okay.
ScottK: Um so um and we do have a lot um in stock because we most of our customers buying the same types of materials and stuff. So, we just got to keep up with um what's selling. Uh so, we'd have generally a couple months worth on site of material.
John Miranda: Makes sense.
ScottK: Um
John Miranda: And you you're using QBDT, right? The desktop version.
ScottK: yes. Yeah. Enterprise, I believe.
John Miranda: Nice.
ScottK: Yep.
John Miranda: And that has like the whole inventory management suite already within that platform,
ScottK: Yeah. And that's where our part numbering and all this other stuff and pricing it comes from.
John Miranda: right?
ScottK: And method just pulls that back in when we need
John Miranda: Makes sense.
ScottK: it.
John Miranda: And then from there, you guys create the sales order.

00:10:47

John Miranda: Um um and then from that you would eventually ship. And is shipping handled outside of method? Do you have your own like process there?

ScottK: Yeah. Yeah. So, shipping, we have a a separate computer for shipping.
John Miranda: And
ScottK: It's all done externally. So, it's it's e if it's FedEx, we use their app. If it's UPS, we use their app. We generate. So,
Patrick Kelly: Huh?
ScottK: it's a little bit of a manual process there to get the actual tracking numbers and things, but our order desk person handles all that logistics.
John Miranda: Yeah, makes sense. Uh, how do you guys uh like the current process right now with since you're operating with it seems like a couple different systems, right? You have your your initial uh um software to actually create everything and then you have method where where we do the quoting, the sales orders, the purchase orders and then QBO to handle the invoicing. Like is that flow like how how's that flow for you guys?
ScottK: Yeah. So, um, what we're working on, we kind of live in our blue manager, our custom side, and that's where a lot of data is, except for the financial aspects and inventory.

00:11:56

ScottK: Um, right now we're trying to improve and maybe even get closer to automating the quoting where this is where I'm I've connecting now to your API. Um, right now we pulling all your all our contacts and information over. Next is going to be generating quotes. So we are looking to kind of build it in that way and feed it through method. Um, and then later we'll we're going to look more into possibly moving the inventory control over to our software, too. So, I think our software is going to end up being the hub and you're the widget between the financial side of things, if that makes
John Miranda: No, that's a that's a good analogy.
ScottK: sense.
John Miranda: Um, do you see like is there any like current gaps in the workflow? Like where do things in from your experience go could go wrong and like how did you guys overcome it?
ScottK: Um so this is why we actually have Patrick on board trying to help us with kind of consolidating some systems and processes.
Patrick Kelly: Mhm.
ScottK: Um we are starting to leverage HubSpot a lot more to stay on top of things.

00:13:08

ScottK: Um and we are again trying right now we quoting is pretty painful for us. It's a time consuming process. So, we're looking to get efficient there. And then the next things I think would be better inventory control and then shipping and where we can notify and stuff. So, we we understand where all our gaps are and and just trying to figure out um kind of taking chunks of it at a time. Uh this yeah we've we've been a pretty small company um been around about 10 years and um since I became general manager about two years ago. The goal is to get us in ready for growth. Um so yeah part of that is taking all these little pieces and trying to get them to work better and especially as the team grows. So, um
John Miranda: Yeah, we're happy that we're part of that growth and you guys chose us to help with that widget
ScottK: yeah.
John Miranda: experience um or part of that workflow which is we're excited about. Uh but we all obviously want you know uh make that experience 10 times better for you.

00:14:15

John Miranda: And I know Alex must have done so many customizations to make those those workflows possible. Uh which customizations and method did you find like uh were the most impactful and
Patrick Kelly: Mhm.
John Miranda: like what problem were they solving for you?
ScottK: Yeah.
John Miranda: Exactly.
ScottK: So, a a while back when we first started with method, we had some customization things done and things were clunky and not working well. And before I came on board as general manager, we just kind of were living with it. And then um we finally got um met Alex and oh my goodness, he's a whiz and he actually started going through and figuring out all the problems that the previous person just didn't understand or get our customization correctly. So he fixed a lot of that performance and now having him on a monthly basis able to keep tweaking and making the corrections is has been huge over the last several months. like I can't tell you how nice it's been uh to fix our product and get it working the way we want. So, um
John Miranda: That's great.

00:15:23

John Miranda: Um, Alex is great.
ScottK: yeah.
John Miranda: He He's a He is a wizard at in our PS team. Um, do you mind like jumping a little more deeper into what customizations or
ScottK: Yeah. So,
John Miranda: the
ScottK: the quoting is kind of complicated. We got lots of different rules and stuff.
John Miranda: Okay.
ScottK: Um,
John Miranda: Yeah.
ScottK: so he started doing that and then we're like simple things like, "Oh, it'd be nice to make a copy of this so I can edit it and send out a different quote where we used to have to manually re-enter things." You know, all this time stuff he's been helping a lot with. Uh, he also helped me get the API going um, very well. So, I'm very excited about that. Um, and I think right now, yeah, every time there's some little thing we think of that can improve time and efficiency, we we tell him and he just gets it done. Um, and I think we're almost bug free now, Scott, right? I know you haven't spoken much because I've been talking the whole time here.

00:16:26

ScottK: Scott kind of lives in the quoting world and he might be actually able to comment a little bit more what Alex has been doing for improving his job. I can't hear you, Scott. So, I don't know if you're
Patrick Kelly: Yeah, it looks like you you came off mute, but I can't hear you.
John Miranda: Yeah, I can't hear you either.
ScottK: working.
Patrick Kelly: I think John our focus has been all the things looking hard at all the things that we do manually that take time and seeing if there's a reasonable way to to automate pieces of that even even where we have to you know batch load information because of of you know product IDs changing you know and so the the work that Scott's been doing with Alex on finding how to connect our blue manager and what data we can

feed directly into method to reduce the amount of manual entry uh you know not only saves time but should make things more accurate because uh you know every time we humans touch something there's a risk. So, um,
ScottK: Yep.
Patrick Kelly: so that we're looking hard at at all those touch points, um, where we're having to do something manually and seeing if there's a reasonable amount of effort to get it to go automatically.

00:17:45

John Miranda: You know that that's a great comment there Patrick because what I'm when I've been talking to customers one of the biggest like competitors is just the manual process today like pen and paper or doing things like that other obviously other software systems you know can do this as well but
Patrick Kelly: Mhm.
John Miranda: a majority of SMBs in the wholesale distribution um you know vertical they're doing a lot of things by themselves manually and if we can do something to help that um that's the end goals and what were those manual process that were that you're actually actually talking about here can you jump in a little there
Patrick Kelly: all the data that goes into a quote,
ScottK: Um Oh
Patrick Kelly: right, Scott? You know, because it's there's basic, you know,
ScottK: yeah.
Patrick Kelly: there's there's names and addresses and emails and stuff um about the
John Miranda: There.
Patrick Kelly: boards that does already exist in Blue Manager that goes into pricing in terms of sizing and color and things like that. And all of that has to get, you know, looked up and added and put in. So,

00:18:49

ScottK: Yeah,
Patrick Kelly: if
ScottK: just so right now the way the current process works, we actually have a design team in India that also supports us and we've got them doing some of the quoting. So

it's such a tedious task to manually export our data CSV get it into method as a little bit of a process and the we the customer information is not linked right now. So once it's in the system then Scott comes in looks at all these new quotes and now has to figure out the right customer the right shipping address. That takes time. So this is our first immediate thing to fix.
John Miranda: Mhm.
ScottK: And then um and once it's in there, we got to make sure the pricing rules worked right and any other things and nothing else was missed.
Patrick Kelly: I'm
ScottK: So it's a tedious task right now. And certainly there's too many points where mistakes happen. So um yeah,
John Miranda: Mhm.
ScottK: that's pretty much our pain point at the moment.
John Miranda: And you found that with the processes that you've implemented that painoint has been alleviated and you've

00:19:55

ScottK: Well, it's not alleviated yet.
John Miranda: seen working on it.
ScottK: We're working on it.
John Miranda: He's getting
ScottK: Yeah. Yeah. I mean,
Patrick Kelly: going to put peace A little piece at a time,
ScottK: methods the nice Yeah.
John Miranda: there.
Patrick Kelly: you know.
ScottK: But it's nice to know methods capable of as helping us with that with the API and everything. So, um it's just uh yeah, a little bit of customization on both ends, but everything takes time.
John Miranda: And a question I had was um who typically uses uh method um for for the quoting the um the purchase orders and sales orders like who on your team uses that and like the position that they
ScottK: Well,
John Miranda: hold.
ScottK: so Scott's our estimator and then we have the order desk um person who's also in charge of production uh production coordinator. So, she's always in there looking at it

for sales orders and things that are going on. And then our sales team has access to see the quotes we've generated for them. Um and then we've been you leadership's been sort of using it to generate um we'd like to be able to do more forecasting and stuff.

00:21:03

ScottK: Um and we've been sort of working on that. That's kind of our next thing to work on with Alex. And then this whole thing about generating commission reports uh through method instead. Um these are some newer things we've been working with Alex on. Um, and we believe that the invoicing piece is needs to get brought over to method. It's just that's going to take it is going to require a little bit more effort to get our accounting people on team on board. The problem is um we're we're owned by Blackstone Global and there's about five business units here. So, we share the resources of accounting and everything else. So they have a lot going on and they sometimes one little business unit asking for some change is doesn't go very
John Miranda: For sure.
ScottK: far.
John Miranda: Uh it's so so funny you're talking about the invoices because yesterday I had a meeting and we're trying to understand why we have a big drop off rate with our invoicing experience today. And you mentioned that your your accountants they maybe they don't trust me invoices yet and they prefer to use QBO.

00:22:14

ScottK: Well, so they told me a couple of things.
John Miranda: Um
ScottK: One is all the payment things, credit card, everything else has all been set up in there. Um, they also said that they live in there.
John Miranda: yeah.
ScottK: They don't like what's this method thing? They don't live in method. So that's where I keep getting all the push back,
John Miranda: Yeah.
ScottK: you know, and they're basically saying everything works on my side. I don't know why I need to change. So that's that's really where we're at. It's just totally different

John Miranda: Yeah. No, it makes sense. Um,
ScottK: department.
John Miranda: we have four minutes left. Uh, one last question before I you guys can talk to ask me any questions. I know you must have some. Is uh if you could wave a this is a hypothetical hypothetical question, but if you could wave a magic wand and change one thing about method, what would that be to satisfy your workflows?
ScottK: Wow. I think you solved it by giving us Alex to seriously.

00:23:17

ScottK: Um it it's even in those meetings we'll ask for something and we're so used to oh
John Miranda: Okay.
ScottK: we'll get back to you. No. Bam. He fixes it right in front of you. It's just crazy. I that has been such um so very happy to have him and it's so worth it. And um I I think that changed it from night to day,
John Miranda: Of
ScottK: you
Patrick Kelly: Yeah,
John Miranda: course.
Patrick Kelly: I I'll I I'll give you one because we're not there yet,
ScottK: know.
Patrick Kelly: right?
John Miranda: Yeah.
Patrick Kelly: The the perfect world for me would be, you know, the the project gets put together in our blue manager software which has all the details about what needs to be built uh and what uh what products are involved and so therefore what efforts involved and that when a button gets here's right this is my my fantasy uh a button gets pushed in blue manager which creates the quote and then a button gets pushed in method to confirm it, which sends it out via HubSpot. So there's a record that it went out with the quote attached to it and all of that is the pressing of two buttons instead of today, which would require a few hundred clicks, right?

00:24:32

John Miranda: Yeah.
Patrick Kelly: That that would be that would be to get there would be something we
ScottK: Yeah,
John Miranda: Wow.
Patrick Kelly: would and we would we would have to trust,
John Miranda: Uh I hope Alec working on
Patrick Kelly: right? we to work on that and to trust it because you're right part of it is trust the accounting people right
John Miranda: that.
Patrick Kelly: the numbers are important they impact all kinds of things right and our quotes need to be
John Miranda: Yeah.
Patrick Kelly: need to be right um because if we make a mistake it you know it costs money so um so doing that and trusting that as you know I mean you work on product stuff you know testing is critical and QC is critical so um
John Miranda: 100%
Patrick Kelly: yeah that would be I that would be my fantasy. I think I think it's going to take work,
John Miranda: hopefully.
Patrick Kelly: but I there I there's glimmers of hope that we might be able to do that.
ScottK: Yep.
John Miranda: I think there is and um just just in general how fast the the company is evolving right now and how how important it is to like is to satisfy our customers pain like this this possibly could be something in reality sooner than you think. So um I do really appreciate your time here guys. Like thanks so much for talking to me.
Patrick Kelly: Good.
John Miranda: Did you guys have any questions you wanted to ask me while I'm still here?
ScottK: No, I I'm glad we got to meet and um and talk and yeah, we've been, like I said, for what we use it for, we've been very happy.
John Miranda: That's amazing. Well, thanks so much,
Patrick Kelly: Mhm.
John Miranda: guys. Uh, do you mind if I reach out to you again in the future? If I have any like questions I want to ask you, run you by, maybe learn more about some specific aspect of your workflow, or maybe if you want to be part of inventory testing as well. That's fine.
